Bio 1114 Chapter 23: The Evolution of Populations. Genetic drift that occurs when the size of a population is reduced, as by a natural disaster or human actions. Typically, the surviving population is no longer genetically representative of the original population.

AP Bio Chapter 23-1 Chapter 23: Evolution of Populations 1. What is microevolution? Microevolution is a change in allele frequencies in a population over generations. 2. What are the three main mechanisms that can cause changes in allele frequency? Natural selection, genetic drift (chance events that

alter allele frequencies), and gene flow (the transfer of alleles between
