Chapter 23: The Evolution of Populations This chapter begins with the idea that we focused on as we closed the last chapter: Individuals do not evolve! Populations evolve. The Overview looks at the work of Peter and Rosemary Grant with Galápagos finches to illustrate this point, and the rest of the chapter examines the change in populations over time. As in the last Chapter 23 The evolution of Population Flashcards | Quizlet

Chapter 23: Evolution of Populations 1. What is microevolution? Microevolution is a change in allele frequencies in a population over generations. 2. What are the three main mechanisms that can cause changes in allele frequency? Natural selection, genetic drift (chance events that alter allele frequencies), and gene flow (the transfer of alleles between

H.M. Hyndman: The Evolution of Revolution (Chapter 23)

Bio 1114 Chapter 23: The Evolution of Populations. Genetic drift that occurs when the size of a population

is reduced, as by a natural disaster or human actions. Typically, the surviving population is no longer genetically representative of the original population. [Campbell Biology 9th Chapter 23 - Coursepaper.com](#)
