Science is a living, organic activity, the meaning and understanding of which have evolved incrementally over human history. This book, the second in a roughly chronological series, explores the evolution of science from the advents of Christianity and Islam through the Middle Ages, focusing especially on the historical relationship between science and religion. Specific topics include technological innovations during the Middle Ages; Islamic science; the Crusades; Gothic cathedrals; and the founding of Western universities. Close attention is given to such figures as Paul the Apostle, Hippolytus, Lactantius, Cyril of Alexandria, Hypatia, Cosmas Indicopleustes, and the Prophet Mohammed.

Magic, both benevolent (white) and malign (black), has been practiced in the British Isles since at least the Iron Age (800 BCE – CE 43). “ Curse tablets ” —metal plates inscribed with curses intended to harm specific people—date from the Roman Empire. The Anglo-Saxons who settled in England in the fifth and sixth centuries used ritual curses in documents, and wrote spells and charms. When they became Christians in the seventh century, the new “ magicians ” were saints, who performed miracles. When William of Normandy became king in 1066, there was a resurgence of belief in magic. The Church was able to quell the fear of magicians, but the Reformation saw its revival, with numerous witchcraft trials in the late 16th and 17th centuries.

Presented in Large Print Format for easy reading this is Little Dorrit Book 2 Volume 2Manifold are the cares of wealth and state. Mr Dorrit's satisfaction in remembering that it had not been necessary for him to announce himself to Clennam and Co., or to make an allusion to his having had any knowledge of the intrusive person of that name, had been damped over-night, while it was still fresh, by a debate that arose within him whether or no he should take the Marshalsea in his way back, and look at the old gate. He had decided not to do so; and had astonished the coachman by being very fierce with him for proposing to go over London Bridge and recross the river by Waterloo Bridge—a course which would have taken him almost within sight of his old quarters. Still, for all that, the question had raised a conflict in his breast; and, for some odd reason or no reason, he was vaguely dissatisfied. Even at the Merdle dinner-table next day, he was so out of sorts about it that he continued at intervals to turn it over and over, in a manner frightfully inconsistent with the good society surrounding him. It made him hot to think what the Chief Butler's opinion of him would have been, if that illustrious personage could have plumbed with that heavy eye of his the stream of his meditations.

For twenty years, the Roman Empire conquered its way through modern-day Germany, claiming all lands from the Rhine to the Elbe. However, when at last all appeared to be under control, a catastrophe erupted that claimed the lives of 10,000 legionnaires and laid Rome's imperial ambitions for Germania into the dust. In late September of 9 AD, three Roman legions, while marching to suppress a distant tribal rebellion, were attacked in a four-day battle with the Germanic barbarians. The Romans, under the leadership of the provinces governor, Publius Quinctilius Varus, were taken completely by surprise, betrayed by a member of their own ranks: the German officer and secret rebel leader, Arminius. The defeat was a heavy blow to both Rome's military and its pride. Though the disaster was ruthlessly avenged soon afterwards, later attempts at conquering the Germans were half-hearted at best. Four days in September thoroughly examines the ancient sources and challenges the hypotheses of modern scholars to present a clear picture of the prelude to the battle, the fighting itself and its aftermath.

*History and Climate Change* is a balanced and comprehensive overview of the links between climate and man's advance from early to modern times. It draws upon demographic, economic, urban, religious and military perspectives. It is a synthesis of the many historical and scientific theories, which have arisen regarding man's progress through the ages. Central to the book is the question of whether climate variation is a fundamental trigger mechanism from which other historical sequences develop, or one amongst a number of other factors, decisive only when a regime/society is poised for change. Evidence for prolonged climate change is not that extensive. But it is clear that climatic variation has regularly played a part in historical development. Particular attention is here paid to Europe since AD 211. Cold and warmth, wetness and aridity can create contrary reactions within societies, which can be interpreted in very different ways by scholars from different disciplines. Does climate change exacerbate famine and epidemics? Did climate fluctuation play a part in pivotal historical events such as the mass exodus of Hsuing-nu from China, the pressure of the Huns on the Romans and the genesis of the Crusades? Did the bitter Finnish winter of 1939-40 ensure the ultimate defeat of Hitler? These episodes, and many others are discussed throughout the book in the authors distinctive style, with maps and photographs to illustrate the examples given.
