World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “ smart factories ” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Revolution within a state almost invariably leads to intense security competition between states, and often to war. In *Revolution and War*, Stephen M. Walt explains why this is so, and suggests how the risk of conflicts brought on by domestic upheaval might be reduced in the future. In doing so, he explores one of the basic questions of international relations: What are the connections between domestic politics and foreign policy? Walt begins by exposing the flaws in existing theories about the relationship between revolution and war. Drawing on the theoretical literature about revolution and the realist perspective on international politics, he argues that revolutions cause wars by altering the balance of threats between a revolutionary state and its rivals. Each state sees the other as both a looming danger and a vulnerable adversary, making war seem both necessary and attractive. Walt traces the dynamics of this argument through detailed studies of the French, Russian, and Iranian revolutions, and through briefer treatment of the American, Mexican, Turkish, and Chinese cases. He also considers the experience of the Soviet Union, whose revolutionary transformation led to conflict within the former Soviet empire but not with the outside world. An important refinement of realist approaches to international politics, this book unites the study of revolution with scholarship on the causes of war.
