The first of three books in IFPRI's climate change in Africa series, West African Agriculture and Climate Change: A Comprehensive Analysis examines the food security threats facing 11 of the countries that make up West Africa -- Benin, Burkina Faso, Côte d'Ivoire, Ghana, Guinea, Liberia, Niger, Nigeria, Senegal, Sierra Leone, and Togo -- and explores how climate change will increase the efforts needed to achieve sustainable food security throughout the region. West Africa's population is expected to grow at least through mid-century. The region will also see income growth. Both will put increased pressure on the natural resources needed to produce food, and climate change makes the challenges greater. West Africa is already experiencing rising temperatures, shifting precipitation patterns, and increasing extreme events. Without attention to adaptation, the poor will suffer. Through the use of hundreds of scenario maps, models, figures, and detailed analysis, the editors and contributors of West African Agriculture and Climate Change present plausible future scenarios that combine economic and biophysical characteristics to explore the possible

consequences for agriculture, food security, and resources management to 2050. They also offer recommendations to national governments and regional economic agencies already dealing with the vulnerabilities of climate change and deviations in environment. Decisionmakers and researchers will find West African Agriculture and Climate Change a vital tool for shaping policy and studying the various and likely consequences of climate change.

At a time in history when conflict erupts daily in far-flung corners of the world, ending severe deprivation may be critical to global peace and stability. Yet we are far from reaching the goal of reducing hunger by 2025. The authors of this book bring good news: hunger can be banished in our lifetime. They first distill what is already known about fighting hunger and then report on important new research findings and projections that show it can be done, through new and renewed institutions, scientific innovation, global economics and investment, and sustainable environmental practices. Although the book encompasses a wide array of ideas, arguments, facts, and figures, it is not a dry, academic text. Anyone wanting a better understanding of poverty and hunger and how to end it will benefit from reading it.

Stigma leads to poorer health. Edited by Brenda Major, John F. Dovidio, and Bruce G. Link, *The Oxford Handbook of Stigma, Discrimination, and Health* provides compelling evidence from various disciplines in support of this thesis and explains how and why health disparities exist and persist. Stigmatization involves distinguishing people by a socially conferred "mark," seeing them as deviant, and devaluing and socially excluding them. The core insight of this book is that the social processes of stigma reliably translate into the biology of disease and death. Contributors elucidate this insight by showing exactly how stigma negatively affects health and creates health disparities through multiple mechanisms operating at different levels of influence.

Understanding the causes and consequences of health disparities requires a multi-level analysis that considers structural forces, psychological processes, and biological mechanisms. This volume's unique multidisciplinary approach brings together social and health psychologists, sociologists, public health scholars, and medical ethicists to comprehensively assess stigma's impact on health. It goes beyond the common practice of studying one stigmatized group at a time to examine the stigma-health link across multiple stigmatized groups. This broad, multidisciplinary framework not only illuminates the significant effects stigma has when aggregated across the health of many groups but also increases understanding of which stigma processes are general across groups and which are particular to specific groups. Here, a compendium of leading international experts point readers toward potential policy responses and possibilities for intervention as well as to the large gaps in understanding that remain. This book is the definitive source of scholarship on stigma and physical health for established and emerging scholars, practitioners, and students in psychology, sociology, public health, medicine, law,

political science, geography, and the allied disciplines.
