of the Commonwealth of Kentucky Kluwer Law International B.V. Multiple Sclerosis (MS) is generally understood to be an inflammatory autoimmune disease of the central nervous system. While we still are not certain of the root cause of MS, research results suggest that unknown environmental factors and the presence of specific genes seem the most probable targets. MS causes an

inflammatory response in the central nervous system leading to neurodegeneration, oligodendrocyte death, axonal damage, and gliosis. Over the past five years ongoing research has greatly expanded our understanding of the pathogenesis of MS, detailed insight into the epidemiology and genetic factors related to MS, the introduction of new technologies and tests to better diagnose and predict the future course of

the disease and the introduction of new treatments targeting MS. This collection of review chapters provides a comprehensive reference into the science and clinical applications of the latest Multiple Sclerosis research and will be a valuable resource for the neuroscience research community and the clinical neurology community of researchers and practitioners. A comprehensive

tutorial reference detailing our current foundational understanding of Multiple Sclerosis. Includes chapters on key topics including the genetics of MS, MRI imaging and MS, and the latest treatment options. Each chapter is translational and focuses on current research and impact on diagnosis and treatment options. Documents Accompanying the Journal Elsevier. Derived from the renowned

matters; contracts with regard to software licensing and network services, with special attention to case law in this area; rules with regard to electronic evidence, regulation of electronic signatures, electronic banking, and electronic commerce; specific laws and regulations with respect to the liability of network operators and service providers and related product liability;

protection of individual persons in the context of the processing of personal data and confidentiality; and the application of substantive criminal law in the area of ICT. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable time-saving tool for business and legal professionals alike. The complex internal structure of the Sun can now be studied in detail through helioseismology and neutrino astronomy. The VI Canary Islands Winter School of Astrophysics was dedicated to examining these powerful new techniques. Based on this

meeting, eight specially-written chapters by world-experts are presented in this timely volume. We are shown how the internal composition and dynamical structure of the Sun can be deduced through helioseismology; and how the central temperature can be determined from the flux of solar neutrinos. This volume provides an excellent introduction for graduate students and an up-to-date overview for researchers

working on the Sun, neutrino astronomy and helio- and astero seismology.
