The complex internal structure of the Sun can now be studied in detail through helioseismology and neutrino astronomy. The VI Canary Islands Winter School of Astrophysics was dedicated to examining these powerful new techniques. Based on this meeting, eight specially-written chapters by world-experts are presented in this timely volume. We are shown how the internal composition and dynamical structure of the Sun can be deduced through helioseismology; and how the central temperature can be determined from the flux of solar neutrinos. The orientalists have been studying the seerah of the prophet with a view to casting doubt and raising suspicions and discrediting the life and personality of the Prophet (saw). Their approach has evolved over the period of time. At times they have been vicious in their attacks as was the case in the 18th century which with time during the 19th and 20th century became seemingly sympathetic to his life. This study by Dr Muhammad Mohar Ali critically analyses the works of three famous orientalists, William Muir, D.S Margoliouth and W.

Montgomery Watt. Dr Ali refutes the charges levelled by them against the life and character of the Prophet (saw) with an erudition which the treatment of such a subject requires.
