First Published in 2000. This is the fourth edition of a handbook that has already become well-known to many academic staff. Its popularity rests on the way it presents ideas about teaching and learning underpinned by research findings, but in a form that provides detailed, helpful advice for teachers in higher education. The Handbook could be used to support any of the many training programmes being introduced into colleges and universities around the world, as indeed previous editions have already done. The various chapters focus on the specific skills that are dealt with in such programmes: large-group and small-group teaching, methods of assessment and so on. They also include advice on how to present conference papers, an area where advice seems sorely lacking.

Every elementary teacher deals with students who struggle as readers on a daily basis. Each

struggling child is complex and each has a unique history as a learner. In *One Child at a Time*, experienced literacy specialist and consultant Pat Johnson provides a framework she has used in numerous K-6 classrooms to help teachers understand and assist individual children. The four-step process outlined in the book enables teachers to focus carefully on specific strategies and behaviors; analyze them with theoretical and practical lenses; design targeted instruction in keeping with current research on reading process; and then assess and refine the teaching in conferences with the child. The framework is by no means an easy answer to a difficult problem, but through its use teachers learn how the reading process works for proficient readers and how to support struggling readers as they construct their own reading process. The text is packed with examples of actual conferences with students, detailing how and when Pat and her colleagues intervene to instruct and assess. The examples of follow-up assessment and analysis of struggling readers over days and weeks provide an indispensable model for teachers. Pat shows how to use this framework successfully with a range of learners, including young children, English language learners, and students in the upper elementary grades who are stalled in their literacy progress. She builds upon her decades of work as a classroom teacher, literacy specialist, and consultant in schools with high poverty and diversity, to demonstrate how this framework can be useful in any setting.

The story behind D-Day begins in 1939 when Nazi Germany, led by Adolf Hitler, attacked Poland and ignited World War Two. The following year, the Germans occupied France and Western Europe and launched a vicious air war against Britain. In 1941, they invaded the Soviet Union. Seemingly unstoppable, the Nazis now held virtually all of Europe. They imposed a ruthless system of control and unleashed the horror of the Holocaust. However, by 1943, the tide had begun to turn in favor of the Allies, the forces opposed to Germany. In the east, despite huge losses, the Soviets began to force the Germans back.

*Developing Arts Loving Readers* is based on the premise that children can and do learn a great deal about the arts and their own abilities innately. Involvement and immersion author Nan. L. McDonald argues, are the ways in which children may feel welcome to write, move, create, draw, and otherwise express ideas about art and music directly. Teaching suggestions are offered to classroom teachers and other non-specialists, so that classroom-reading activities may be extended into group discussions, co-operative learning-arts projects, and creative performances.

First Published in 2001. The purpose of this curriculum guide is to help student teachers and newly qualified teachers to make a start on learning how to become competent teachers of English. Despite the emphasis given in training courses to the teaching of English, newly qualified teachers often feel underprepared for it and frequently mention their concerns about this. These concerns can be partly explained by a general lack of confidence in this key area and partly by widespread media and political criticism of the teaching of literacy. It is also because it is often difficult for a student to make the connection between observation of key teaching strategies and his or her own personal practice.
