NOTE: We ' re in the process of adding the images back in to all notes pages – please check back soon! The skin is composed of two main layers: the epidermis and the dermis.

### Chapter 36 Skeletal, Muscular, and Integumentary Systems, SE

Section 36-2 During muscle contraction, the knoblike head of a myosin filament attaches to a binding site on actin, forming a cross-bridge. Powered by ATP, the myosin cross-bridge changes shape and pulls the actin filament toward the center of the sarcomere. The cross-bridge is broken, the myosin binds to another site on the actin filament, and the
