This unique book clearly
depicts a need for
supervision in gerontological
social work settings and
provides a framework for
approaching supervision.
Grounded in two distinct
bodies of literature, social
work supervision and
gerontological social work,
this important book
thoroughly examines present

gerontological practice and
principles and focuses on the
stages and styles of helping,
and teaching case workers to
improve agency efficiency.
Gerontological Social Work
Supervision assumes some
gerontological knowledge
and experience with aging on
the part of the supervisor, yet
provides an abundance of
informative and practical
methods to aid agency
success rates with their
clients. The authors discuss
the supervisory position as a
positive asset in all aspects of
case work and management.

Throughout the chapters, the
value of a supervisor is
compounded, whether the
supervisor is helping a worker
in seeing a broader scope of
the field of social work with
the elderly, providing
guidance through gray areas
of ethics, or teaching practice
skills for work with
individuals, groups, or
families, the need for an
involved and prepared case
worker supervisor becomes
increasingly clear through the
theories and scenarios
presented. Extensive
examples and helpful

considerations make this an invaluable book for agency supervisors and workers. An entire chapter is devoted to providing supervision in the educational arena, promoting a greater awareness of gerontological social work in students preparing for the field. The appendices are packed with lists of additional works on supervision in social work, bibliographies of selected readings in case management, entitlement, long term care, and family caregiving.

Jones & Bartlett Learning MATLAB® Primer for Speech-Language Pathology and Audiology provides training and access to MATLAB®, the computational language developed by MathWorks®.

While there are MATLAB® textbooks and manuals written for the field of engineering, there are no textbooks targeting allied health disciplines, particularly speech-language pathology and audiology. Research and practice in this field can greatly benefit from quantification and automation in data management, a domain that is increasingly labor-intensive. The text anticipates and promotes increased reliance on quantification and automation in the fields of

speech-language pathology and audiology. This book is intended for students, practitioners, and researchers in speech-language pathology and audiology who wish to increase their productivity by incorporating and automating common research procedures and data-analysis calculations, or who wish to develop new tools and methods for their own paradigms and data processing. It assumes no prior knowledge of programming, but requires the reader to have a grasp of

basic computer skills, such as managing folders, moving files, and navigating file paths and folder structures. Content and style are chosen so as to lower the threshold for an audience who has limited training in computer science. Concepts are presented in a personalized writing style (almost a dialogue with the reader), along with a didactic format similar to programmed instruction, using applications and work assignments that are concrete and manageable. Key

features include: * A comprehensive introduction for the user in an effort to limit background knowledge needed to understand the content * Several mathematical review appendices * Exercises for the student to apply skills learned in laboratory and clinical applications

This book is designed for people with a working knowledge of APL who would like to increase their fluency in the wide range of extra facilities offered by second-generation APL products. Although the primary product in view is IBM's APL2 as implemented on mainframe, PC and RS/6000, the language features covered share considerable common ground with APL *PLUS II and Oyalog APL. This is a book about skills rather than knowledge, and an acquaintance with some variety of APL on the reader's part is assumed from the start. It is

designed to be read as a continuous text, interspersed with exercises designed to give progressively deeper insight into what the authors conceive as the features which have the greatest impact on programming techniques. It would also be suitable as a textbook for a second course in APL2, although experience suggests that most programming language learning is now by self study, so that this volume is more likely to provide follow-up reading to more elementary texts such as "APL2 at a Glance" by Brown, Pakin and Polivka. Material is

discussed more informally than in a language manual - in this book textual bulk is in proportion to difficulty and importance rather than to the extent of technical details. Indeed, some APL2 extensions are not covered at all where the technicalities pose no great problems in understanding and can be readily assimilated from the language manuals. With Special Reference to the Southern United States Guilford Publications Based on many years of research and teaching, this book brings together all the important topics in linear

vibration theory, including failure models, kinematics and modeling, unstable vibrating systems, rotordynamics, model reduction methods, and finite element methods utilizing truss, beam, membrane and solid elements. It also explores in detail active vibration control, instability and modal analysis. The book provides the modeling skills and knowledge required for modern engineering practice, plus the tools needed to identify, formulate and solve

engineering problems effectively.

Different Approaches Routledge

This research-led textbook investigates the use of new technologies for language learning, linking theory to practice. The book synthesises previous technology use (including Computer Assisted Language Learning) theory and research, and describes practical applications for both second and foreign language classrooms, including detailed examples of these applications and the procedures for evaluating them.
