Patterns for College Writing John Wiley & Sons

Assuming no previous study in logic, this informal yet rigorous text covers the material of a standard undergraduate first

course in mathematical logic, using natural deduction and leading up to the completeness theorem for first-order logic. At each stage of the text, the reader is given an intuition based on standard mathematical practice, which is subsequently developed with clean formal mathematics. Alongside the practical examples, readers learn what can and can't be calculated; for example the correctness of a derivation proving a given sequent can be tested mechanically, but there is no general mechanical test for the existence of a derivation proving the given sequent. The undecidability results are proved rigorously in an optional final chapter, assuming Matiyasevich's theorem characterising the computably enumerable relations. Rigorous proofs of the adequacy and completeness proofs of the relevant logics are provided, with careful attention to the languages involved. Optional sections discuss the classification of mathematical structures by first-order theories; the required theory of cardinality is developed from scratch. Throughout the book there are notes on historical aspects of the material, and connections with linguistics and computer science, and the discussion of syntax and semantics is influenced by modern linguistic approaches. Two basic themes in recent

cognitive science studies of actual human reasoning are also introduced. Including extensive exercises and selected solutions, this text is ideal for students in Logic, Mathematics, Philosophy, and Computer Science.

The Newbery Medal and Coretta Scott King Award-winning classic about a boy who decides to hit the road to find his father—from Christopher Paul Curtis, author of *The Watsons Go To Birmingham—1963*, a Newbery and Coretta Scott King Honoree. It's 1936, in Flint Michigan. Times may be hard, and ten-year-old Bud may be a motherless boy on the run, but Bud's got a few things going for him: 1. He has his own suitcase full of special things. 2. He's the author of *Bud Caldwell's Rules and Things for Having a Funner Life and Making a Better Liar Out of Yourself*. 3. His momma never told him who his father was, but she left a clue: flyers advertising Herman E. Calloway and his famous band, the Dusky Devastators of the Depression!!!!!! Bud's got an idea that those flyers will lead him to his father. Once he decides to hit the road to find this mystery man, nothing can stop him—not hunger, not fear, not vampires, not even Herman E. Calloway himself. AN ALA BEST BOOK FOR YOUNG ADULTS AN ALA

The two related issues of word order, and subject-verb agreement have occupied center stage in the study of Arabic syntax since the time of Sibawayhi in the eighth century. This book is a contribution to both of these areas. It is grounded within the generative grammar framework in one of its most recent versions, namely Minimalism, as expounded in Chomsky (1995). In this volume, a detailed description is given of word order options in Modern Standard Arabic (MSA) and Palestinian Arabic (PA). It is shown that, perhaps surprisingly, the two varieties allow almost the same range of word orders. The important question of whether Arabic has a VP is addressed: the author argues extensively that Arabic has a VP category. The evidence derives from examining superiority effects, ECP effects, binding, variable interpretations, etc. Also discussed is the content of [Spec, TP] in VSO sentences. It is argued that the position is occupied by an expletive pronoun. The author defends the Expletive Hypothesis which states that in VSO sentences the expletive may take part in checking some features of the verb. A typology of the expletive pronoun in Modern Standard Arabic, Palestinian Arabic, Lebanese Arabic, and Moroccan Arabic is provided. A particularly interesting problem involving pronominal co-reference is the following: if the subject is the antecedent of a pronominal clitic, word order is free; if a

pronominal is cliticized onto the subject, then the antecedent must precede. An account that derives these restrictions without recourse to linear order is proposed.
