This open access book summarises the latest developments on data management in the EU H2020 ENVRIplus project, which brought together more than 20 environmental and Earth science research infrastructures into a single community. It provides readers with a systematic overview of the common challenges faced by research infrastructures and how a 'reference model guided engineering approach can be used to achieve greater interoperability among such infrastructures in the environmental and Earth sciences. The 20 contributions in this book are structured in 5 parts on the design, development, deployment, operation and use of research infrastructures. Part one provides an overview of the state of the art of research infrastructure and relevant e-Infrastructure technologies, part two discusses the reference model guided

engineering approach, the third part presents the software and tools developed for common data management challenges, the fourth part demonstrates the software via several use cases, and the last part discusses the sustainability and future directions.

A social cost-benefit analysis of a proposed publicly funded project, or public policy change, may be commissioned by a municipal, state or federal government, by a government aid agency, or by an international. Proponents of a private project which has significant social impacts may also commission an economic analysis of this type. The key economic questions of any social cost-benefit analysis are: do the benefits of the project exceed the costs, no matter how widely costs and benefits are spread? And which group or groups of individuals benefit and which bear the costs? This book addresses these questions with an emphasis on putting the theory into

practice. The book has several unique features: readers are encouraged to develop their own skills by applying the tools and techniques of cost-benefit analysis to case studies including a project which is developed through the book; the use of spreadsheets is emphasised which is invaluable in allowing readers to test variables and cross-check the accuracy of their economic appraisal; and a dedicated chapter provides guidance on writing up a report which completes the analysis. An appendix lists additional case studies which can be developed in class or as additional projects. Each chapter contains exercises and suggestions for further reading. This book is an ideal text for a course on cost-benefit analysis where the emphasis is on practical applications and teaching students to conduct their own analysis.

The theoretical foundation for real options goes back to the mid 1980s and the development of a model that forms the basis for many current applications of real option theory.

Over the last decade the theory has rapidly expanded and become enriched thanks to increasing research activity. Modern real option theory may be used for the valuation of entire companies as well as for particular investment projects in the presence of uncertainty. As such, the theory of real options can serve as a tool for more practically oriented decision making, providing management with strategies maximizing its capital market value. This book is devoted to examining a new framework for classifying real options from a management and a valuation perspective, giving the advantages and disadvantages of the real option approach. Impulse control theory and the theory of optimal stopping combined with methods of mathematical finance are used to construct arbitrarily complex real option models which can be solved numerically and which yield optimal capital market strategies and values. Various examples are given to demonstrate the potential of this framework. This work will benefit the financial community, companies, as well as academics in mathematical finance by providing an important extension of real option research from both a theoretical and practical point of view.

Endorsed by the Society of Light and Lighting, this practical book offers comprehensive guidance on how colour, light and contrast

can be incorporated within buildings to enhance their usability. The book provides state-of-the-art, clear guidance as well as a valuable information source for busy professionals involved in the design or management of new and existing environments. The ways colour, light and contrast are used within built environments are critical in determining how people interact with the space, and how confident, safe, and secure they will feel when doing so. They also have a major influence on a person's sense of well-being and their ability to use the environment independently and without undue effort. Understanding how to use colour and contrast and how they are influenced by both natural and artificial lighting is vital for all those involved in the design and management of the environments and spaces we all use. In recent years there has been a considerable amount of work undertaken to further our understanding of how colour, light and contrast affect emotion and sensory abilities, and how they can assist or hinder people in their everyday lives. Other publications consider these issues individually but *The Colour, Light and Contrast Manual: designing and managing inclusive built environments* draws knowledge and information together to produce a unique, comprehensive and informative guide to how the three elements can work together to improve the design and management of environments for us all.

Now in its sixth edition, *JAVASCRIPT* guides beginning programmers through web application development using the JavaScript programming language. As with previous editions of the book, the authors introduce key web authoring techniques with a strong focus on industry application. New coverage includes developing for touchscreen and mobile devices, and using the jQuery

library. A real-world project, similar to what students would encounter in a professional setting, is developed chapter by chapter. Because professional web development jobs often require programmers to add features to existing sites, each chapter project uses a professionally designed web site. After completing a course using this textbook, students will be able to use JavaScript to build professional quality, dynamic web sites. The frequent failure of IT projects in the public sector suggests that significant underlying problems remain unsolved. IT projects typically involve a substantial commitment of resources and funds; consequently, project failure can result in the loss of not just the funds invested, but also of the benefits that would have been realized by successful implementation. The delivery of IT projects on time and on budget is inadequate to measure value realization. This research analyzes five Strategic Alignment (SA) perspectives that affect organizational performance in an Australian public agency when implementing IT projects: Organization Strategy (S), Knowledge (K), Decision-making (DM), Enterprise Architecture (EA) and Public Value Plan (PVP). This book shows how public IT decision-makers can realize the benefits of IT investment by effectively employing SA perspectives in IT management.

A Stochastic Control Framework for Real Options in Strategic Evaluation DIANE Publishing

Concerns over urban blight, environmental degradation, climate change, inner-city unemployment, and a host of other socio-economic and environmental problems have forced policy makers, planners, and others interested in the future of our planet to take a closer look at ways to foster more sustainable urban development. Drawing on the author's extensive research, this book examines the role that brownfields redevelopment is playing and can play in our quest for sustainability, focusing primarily on efforts in the US and Canada to build better places for urban dwellers to live, work, and play. It commences by reviewing the nature and scope of the brownfields problem and puts it into a sustainability context, both theoretically and in terms of real costs and benefits. The book then looks at how

brownfields are being used as spaces for developing an array of residential, recreational, and employment-oriented projects that have breathed new life into the urban environment. For a more sustainable future, however, the author argues that more still needs to be done to connect sustainability objectives and processes to redevelopment efforts. This is a study of the nature of urban brownfields redevelopment in North America over the last two decades. It outlines the reasons behind the emerging success of recent brownfields redevelopment. It critically examines how affected stakeholders have overcome the numerous challenges facing brownfields redevelopment. Decision Making with the Analytic Network Process CRC Press Essential for anyone who works with technology in the field, E-DISCOVERY is a hands-on, how-to training guide that provides students with comprehensive coverage of the technology used in e-discovery in civil and criminal cases. The first part of the book gives practical aspects of performing seva in the USA, India and Guyana, South America. I give case histories from my own experience and how I navigated the turbulent waters to deliver what we set out to accomplish. I hope that our team's work will motivate others to understand the difficulties and find solutions to fulfilling the goal of seva. At the end, we could not achieve anything without the help of dedicated team members many of whom gave up their vacations and willingly gave their money and energy to make a difference. The second part of the book examined 5 case studies of our work dealing with kidney and corneal transplants in Guyana, blood and bone marrow drives in the USA under the auspices of the Hindu Mandir Executive Committee, distance learning in the UK and the Global Energy Parliament, Kerala, India. The third part of the book gives cautionary lessons in managing seva projects across the world. The fourth part of the book gives theoretical aspects of seva, which include social networks in management of complex missionary projects, the use of social networking technology in the promotion and scaling up of complex global health initiatives, the growing phenomenon of "voluntourism" and Distance Learning. Our case histories represent a variety of situations across continents. Having initiated and carried these projects from scratch to fruition has given us an insight into the many issues others may face when they initiate their own projects. We experienced frustration at many points in the trajectory of our projects; however, we persevered and perhaps achieved modest success. We should confess that we thought

of abandoning and giving up at multiple stages of our projects, however, we were reminded of the beneficiaries and continued against many odds and obstacles. Some of these could have been prevented but others were inevitable.
