Numerical and Algebraic Expressions and Equations

Chapter 6 Real World Equations and Inequalities In this chapter we will use the geometric relationships that we explored in the last chapter and combine them with the algebra we have learned in prior chapters. First we recall the methods developed in (the first section of) Math at Work 11: Chapter 6

428 Chapter 6 Ratios If we multiply the rate by some factor c , then we must divide the time by the same factor c (or equivalently multiply by $\frac{1}{c}$). This is an example of inverse variation of two quantities. The statement “ y varies inversely as x ” means that: if x multiplied by some factor then y is multiplied by the reciprocal of that factor.
