The thoroughly updated Second Edition of *Health Promotion in Multicultural Populations* grounds readers in the understanding that health promotion programs in multicultural settings require an in-depth knowledge of the cultural group being targeted. Numerous advances and improvements in theory and practice in health promotion and disease prevention (HPDP) are presented. Editors Michael V Kline and Robert M Huff have expanded the book to include increased attention directed to students and instructors while also continuing to provide a handbook for practitioners in the field. This book combines the necessary pedagogical features of a textbook with the scholarship found in a traditional handbook. Several new chapters have been added early in the text to provide stronger foundations for understanding the five sections that follow. The book considers five specific multicultural groups: Hispanic/Latino, African American, American Indian and Alaska Native, Asian American, and Pacific Islander populations. The first chapter in each of the five population group sections presents an overview devoted to understanding this special population from a variety of perspectives. The second chapter of each section explains how to assess, plan, implement, and evaluate health promotion programs for each of the specific groups. The third chapter in each section highlights a case study to emphasize points made in the overview and planning chapters. The fourth chapter in each section provides "Tips" for working with the cultural groups described in that section. New to the Second Edition Devotes a chapter to traditional health beliefs and traditions that can help the practitioner better understand how these beliefs and traditions can impact on Western biomedical practices Contains a new chapter that evaluates health disparities across the U.S. Presents a new chapter that examines ethical dilemmas and considerations in a multicultural context Offers updated citations and content throughout Gives selected Web sites of interest Intended Audience This book is ideal for practitioners and students in the fields of health promotion and education, public health, nursing, medicine, psychology, sociology, social work, physical therapy, radiology technology and other allied professions.

This book brings into focus the technologically augmented nature of global online communities, advancing research methods that reveal the imprint of emergent social forms and characterise digital frontiers of social engagement. Drawing on insights from across the social sciences, it presents a case study of people with passions for reptiles and amphibians to illustrate for next generation researchers how to conduct community research in the real world. Richly illustrated with ethnographic research, together with extensive survey and interview material drawn from around the world, *Research Methods and Global Online Communities* explores the changing nature of communities that form around common interests and are embedded in a digital architecture rather than place. In doing so, this book transcends the digital dualism of online/offline models of community and engages with debates on the social impacts of the internet and the adaptive nature of community. As such, it will appeal to social scientists interested in innovative approaches to characterising digital communities through mixed-methods research practice.

The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. Our *Social World: Introduction to Sociology* inspires students to develop their sociological imaginations, to see the world and personal events from a new perspective, and to confront sociological issues on a day-to-day basis. Organized around the "Social World" model, a conceptual framework that demonstrates the relationships among individuals (the micro level); organizations, institutions, and subcultures (the meso level); and societies and global structures (the macro level), the authors use this framework to help students develop the practice of using three levels of analysis, and to view sociology as an integrated whole, rather than a set of discrete subjects. The Seventh Edition includes new coverage of climate change, the influence of robots and artificial intelligence on workers, race relations in the Trump era, transgender identity and gender fluidity, sexual harassment in the workplace and the #MeToo movement, declining marriage rates, the impact of tracking for students at all academic achievement levels, smoking as an example of health and inequality in the U.S., gun violence and the student movement to control access to guns, social media, and Russian interference in the 2016 election. Whitebark pine is a dominant feature of western high-mountain regions, offering an important source of food and high-quality habitat for species ranging from Clark's nutcracker to the grizzly bear. But in the northwestern United States and southwestern Canada, much of the whitebark pine is disappearing. Why is a high-mountain species found in places rarely disturbed by humans in trouble? And what can be done about it. Whitebark Pine Communities addresses those questions, explaining how a combination of altered fire regimes and fungal infestation is leading to a rapid decline of this once abundant -- and ecologically vital -- species. Leading experts in the field explain what is known about whitebark pine communities and their ecological value, examine its precarious situation, and present the state of knowledge concerning restoration alternatives. The book presents an overview of the ecology and status of whitebark pine communities offers a basic understanding of whitebark pine taxonomy, distribution, and ecology, including environmental tolerances, community disturbance processes, regeneration processes, species interactions, and genetic population structure identifies the threats to whitebark pine communities explains the need for management intervention surveys the extent of impact and losses to date More importantly, the book clearly shows that the knowledge and management tools are available to restore whitebark pine communities both locally and on a significant scale regionally, and it provides specific information about what actions can and must be taken. Whitebark Pine Communities offers a detailed portrait of the ecology of whitebark pine communities and the current threats to them. It brings together leading experts to provide in-depth information on research needs, management approaches, and restoration activities, and will be essential reading for ecologists, land managers, and anyone concerned with the health of forest ecosystems in the western United States.

This volume focuses on the status of the elderly and the disabled after disasters globally as well as the challenges of post-earthquake rebuilding in Haiti. The International Federation of the Red Cross and Red Crescent Societies has estimated that between 1987 and 2007, about 26 million older people were affected each year by natural disasters alone and that this figure could more than double by 2050 due to the rapidly changing demographics of ageing. People with disabilities (physical, medical, sensory or cognitive) are equally at risk of utter neglect during and after disasters. The Australian Agency for International Development estimates that 650 million people across the world have a disability and about 80 per cent of them live in developing countries. Similarly, before the January 2010 earthquake, Haiti was a "country with tremendous development needs and numerous impediments to development," according to Congresswoman Maxine Waters when introducing a Resolution in the US House of Representatives to cancel Haiti's debts in March 2007. These impediments included an overwhelming burden of international debt; lack of personal and community assets; and, very little or no internal and external capacities, all of which have been exacerbated by the aftermath of the earthquake. It was against this background that the Center for Rebuilding Sustainable Communities after Disasters at the University of Massachusetts Boston organized two international Conferences in 2010 – in April, on Rebuilding Sustainable Communities in Haiti in the wake of the January Earthquake; and, in July, on Rebuilding Sustainable Communities with the Elderly and Disabled People after Disasters. This edited book consists of selected papers that were presented at these academic events. The topics include Disaster Experiences of the Elderly and the Disabled in Nigeria; The Vulnerability of Elderly People in the Aftermath of Earthquakes in Iran; Methods for Assessing and Developing Understanding of Resiliency in Communities; The Tuareg's traditional Shelter for Disaster Mitigation and Reconstruction in Libya; and, People with Disabilities in Haiti Before and After the 2010 Earthquake.

Regulation of Parasite Populations is composed of the proceedings of a symposium held at New Orleans, on November 10-14, 1975, and jointly sponsored by the American Microscopical Society and the American Society of Parasitologists. The symposium focuses on the literatures dealing with the regulation of parasite populations. It also introduces some concepts and notions regarding this field of interest. This book reports the five papers presented in the symposium, beginning with the concept of parasitism. It specifically explains the regulation of fish parasite populations and the role of arrested development in the regulation of nematode populations. Aside from the subject at hand, the complementary nature of laboratory work, field studies, and mathematical modeling are explained. This compilation corresponds to an effort to "bridge a gap between some of the ideas and thoughts in ecology and parasitology.

The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. Our Social World: Condensed inspires students to develop their sociological imaginations, to see the world and personal events from a new perspective, and to confront sociological issues on a day-to-day basis. The award-winning author team organizes the text around the "Social World" model, a conceptual framework that

demonstrates the relationships among individuals (the micro level); organizations, institutions, and subcultures (the meso level); and societies and global structures (the macro level). The use of the Social World Model across chapters (represented in a visual diagram in the chapter openers) helps students develop the practice of using three levels of analysis, and to view sociology as an integrated whole, rather than a set of discrete subjects. The Condensed version is adapted from Our Social World: Introduction to Sociology. The Sixth Edition of the Condensed version is made approximately 30% shorter than the full edition by removing selected boxes, editing the main narrative, and combining four chapters into two (Family/Education, and Politics/Economics). The third edition of *Insect Ecology: An Ecosystem Approach* provides a modern perspective of insect ecology that integrates two approaches traditionally used to study insect ecology: evolutionary and ecosystem. This integration substantially broadens the scope of insect ecology and contributes to prediction and resolution of the effects of current environmental changes, as these affect and are affected by insects. The third edition includes an updated and expanded synthesis of feedback and interactions between insects and their environment. This updated material and a new chapter on applications of insect ecology to social and environmental issues effectively demonstrates how evolutionary and ecosystem approaches complement each other, with the intent of stimulating further integration of these approaches in experiments that address insect roles in ecosystems. Effective management of ecosystem resources depends on evaluation of the complex, often complementary, effects of insects on ecosystem conditions, as well as insect responses to changing conditions. Timely revision of a key reference on insect ecology Full coverage of ecosystem structure and function balanced with essential background on evolutionary aspects New chapter on applications to issues such as pest management, ecosystem restoration, invasive species and environmental changes Case studies highlight practical and theoretical applications for topics covered in each chapter

A comprehensive introduction to ocean ecology and a new way of thinking about ocean life Marine ecology is more interdisciplinary, broader in scope, and more intimately linked to human activities than ever before. Ocean Ecology provides advanced undergraduates, graduate students, and practitioners with an integrated approach to marine ecology that reflects these new scientific realities, and prepares students for the challenges of studying and managing the ocean as a complex adaptive system. This authoritative and accessible textbook advances a framework based on interactions among four major features of marine ecosystems—geomorphology, the abiotic environment, biodiversity, and biogeochemistry—and shows how life is a driver of environmental conditions and dynamics. Ocean Ecology explains the ecological processes that link organismal to ecosystem scales and that shape the major types of ocean ecosystems, historically and in today's Anthropocene world. Provides an integrated new approach to understanding and managing the ocean Shows how biological diversity is the heart of functioning ecosystems Spans genes to earth systems, surface to seafloor, and estuary to ocean gyre Links species composition, trait distribution, and other ecological structures to the functioning of ecosystems Explains how fishing, fossil fuel combustion, industrial fertilizer use, and other human impacts are transforming the Anthropocene ocean An essential textbook for students and an invaluable resource for practitioners
