This book grew from a one-semester course offered for

many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory. The core of the book covers the basic topics of independence, conditioning, martingales, convergence in distribution, and Fourier transforms. In addition there are numerous sections treating topics traditionally thought of as more advanced, such as coupling and the KMT strong approximation, option pricing via the equivalent martingale measure, and the isoperimetric inequality for Gaussian processes. The book is not just a presentation of mathematical theory, but is also a discussion of why that theory takes its current form. It will be a secure starting point for anyone who needs to invoke rigorous probabilistic

arguments and understand what they mean.

The theory of expander graphs is a rapidly developing topic in mathematics and computer science, with applications to communication networks, error-correcting codes, cryptography, complexity theory, and much more. *Expander Families and Cayley Graphs: A Beginner's Guide* is a comprehensive introduction to expander graphs, designed to act as a bridge between classroom study and active research in the field of expanders. It equips those with little or no prior knowledge with the skills necessary to both comprehend current research articles and begin their own research. Central to this book are four invariants that measure the

quality of a Cayley graph as a communications network—the isoperimetric constant, the second-largest eigenvalue, the diameter, and the Kazhdan constant. The book poses and answers three core questions: How do these invariants relate to one another? How do they relate to subgroups and quotients? What are their optimal values/growth rates?

Chapters cover topics such as:

- Graph spectra
 - A Cheeger-Buser-type inequality for regular graphs
 - Group quotients and graph coverings
 - Subgroups and Schreier generators
 - Ramanujan graphs and the Alon-Boppana theorem
 - The zig-zag product and its relation to semidirect products of groups
 - Representation theory and eigenvalues of Cayley graphs
 - Kazhdan constants
- The only introductory text on this topic suitable for both undergraduate and graduate students, *Expander Families and Cayley Graphs* requires only one course

in linear algebra and one in group theory. No background in graph theory or representation theory is assumed. Examples and practice problems with varying complexity are included, along with detailed notes on research articles that have appeared in the literature. Many chapters end with suggested research topics that are ideal for student projects.

Ultimate Guide to U.S. Special Forces Skills, Tactics, and Techniques Simon and Schuster

This book offers an innovative analytic account of Cicero's treatment of key political ideas: liberty and equality, government, law, cosmopolitanism and imperialism, republican virtues, and ethical decision-making in politics. Cicero (106-43 BC) is well known as a major player in the turbulent politics of the last three decades of the Roman Republic. But he was a political

thinker, too, influential for many centuries in the Western intellectual and cultural tradition. His theoretical writings stand as the first surviving attempt to articulate a philosophical rationale for republicanism. They were not written in isolation either from the stances he took in his political actions and political oratory of the period, or from his discussions of immediate political issues or questions of character or behaviour in his voluminous correspondence with friends and acquaintances. In this book, Malcolm Schofield situates the intimate interrelationships between Cicero's writings in all these modes within the historical context of a fracturing Roman political order. It exhibits the continuing attractions of Cicero's scheme of republican values, as well as some of its limitations as a response to the crisis that was engulfing Rome. The Lobbying Manual Lippincott

This book is dedicated to
improving healthcare through
reducing delays experienced by
patients. With an interdisciplinary

approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the “ macro system. ” A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is

new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

George Orwell's *Nineteen Eighty-Four* is unquestionably the most

famous dystopian novel of all times. Written in the year of 1948, the author swapped the last two digits while describing a future totalitarian society where the minds, attitudes and actions of the subjects are thoroughly scrutinized by the "Thought Police", suspected dissidents tracked down and where the worship of the mythical party leader Big Brother is forced upon the masses. The low-ranking party member Winston Smith begins secretly to question the whole system and initiates a forbidden love affair with another party member.

First published in 2000, this volume examines the role of industry representation in the EU in the case of the air transport industry. Air transport has contributed to

areas including member state interdependence, national defence in foreign policy considerations and national identity in terms of ' flag carrier ' airlines. Dinos Kyrrou looks at specific case studies concerning aspects of integration of the air transport sector within the European Union. These case studies – an examination of a European Commission Proposal for a Council Directive and the attempt by the Commission to formulate a Proposal for a Council Regulation – are stages in the process of policy formulation which are aimed at enhancing the liberalisation which was completed de jure in 1992. In both cases, the increasing prominence of the Competition Directorate of the European Commission (DGIV) has been evident. Kyrrou ' s question is whether this reflects a restoration or a creation of pride and self.
