This book builds theoretical statistics from the first principles of probability theory. Starting from the basics of probability, the authors develop the theory of statistical inference using techniques, definitions, and concepts that are statistical and are natural extensions and consequences of previous concepts. Intended for first-year graduate students, this book can be used for students majoring in statistics who have a solid mathematics background. It can also be used in a way that stresses the more practical uses of statistical theory, being more concerned with understanding basic statistical concepts and deriving reasonable statistical procedures for a

variety of situations, and less concerned with formal optimality investigations. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Ionic Surfactants and Aqueous Solutions: Biomolecules, Metals and Nanoparticles covers a wide range of subjects related to aqueous systems, from reverse micelles as ion exchangers to the study of micellar phase transfer catalysis for nucleophilic substitution reactions. The diverse background, expertise and professional interests of the contributors to this book give to it a

unique richness of approach in topics of relevance for biotechnology and environmental studies. Over sixty publications presenting research results are combined and expanded in this book by some of the original researchers. At a mature age, and at the summit of successful professional careers, they have taken a second look to the state of the art in the fields that they had pioneered. Eva Rodil and Ana Soto, who had their research formation in the group of Professor Alberto Arce at Universidad de Santiago de Compostela, Spain, are presently professors at that university, Maen Husein is a professor at University of Calgary, Canada. Remy Dumortier, Mohammad Khoshkbarchi, Hamid Rabie and Younok

Dumortier Shin, are presently active leaders in the industrial world in Canada and the USA. The editors are retired academics from McGill University, Montreal, Canada, and coauthors of the book *Classical Thermodynamics of Fluid Systems*.

The latest edition of the essential text and professional reference, with substantial new material on such topics as vEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor.

Introduction to Algorithms uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The algorithms are described in English and in a pseudocode designed to be readable by anyone who

has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities worldwide as well as the standard reference for professionals. The second edition featured new chapters on the role of algorithms, probabilistic analysis and randomized algorithms, and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters, on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence (now called "Divide-and-Conquer"), and an appendix on matrices. It features improved treatment of dynamic programming and

greedy algorithms and a new notion of edge-based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available; the hardcover is available worldwide.

"Surveying Fundamentals and Practices, Sixth Edition," covers up-to-date surveying technology without losing perspective of the need to provide students with a strong foundation in traditional surveying fundamentals. Through clear explanations and applied examples, the text presents the methods of measuring and computing distances, angles, and directions. It provides students with a firm grasp of modern equipment and office and field

procedures related to horizontal control surveys, property surveys, topographic surveys, roadway curve calculations, and construction layout surveys. The sixth edition offers students a "user-friendly" text that they will be able to rely on as a meaningful learning tool in class and at home. Plus! A companion student website, "MyConstructionKit," is now available! MyConstructionKit is an online resource that offers a wealth of study tools to engage students for a variety of Pearson construction management, architecture, and civil engineering technology textbooks!

Recognizing fraudulent or deceptive practices is not always easy. What common

frauds occur in governments and not-for-profits and how can they be avoided?

Illustrating common frauds that make headlines and damage the reputations of government and not-for-profit entities, this title allows accountants to sharpen their forensic skills and uncover and avoid fraudulent activities. It provides an informative case study approach to real world situations. This title will show accountants how to do the following: Determine how interim fraudulent reporting may affect planned reliance on internal controls and any related audit procedures. Identify how personnel policies and procedures can be circumvented and lead to possible fraud or abuse. Apply potential ways to follow up on noted indications of fraud, abuse, and weaknesses in

internal control. Determine how management override of internal controls can lead to possible fraud. Analyze how bribes and kickbacks may occur. Identify how donated assets and capital assets in general might be misappropriated.

- Strategies and Solutions to Advanced Organic Reaction Mechanisms: A New Perspective on McKillop's Problems builds upon

Alexander (Sandy) McKillop's popular text, *Solutions to McKillop's Advanced Problems in Organic Reaction Mechanisms*, providing a unified methodological approach to dealing with problems of organic reaction mechanism. This unique book outlines the logic, experimental insight and problem-solving strategy approaches available when dealing with problems of organic reaction mechanism. These valuable methods emphasize a structured and widely applicable approach relevant for both students and experts in the field. By using the methods described, advanced students and researchers alike will be able to tackle problems in organic reaction mechanism, from the simple and straight forward to the advanced. Provides strategic methods for solving advanced mechanistic problems and applies those techniques to the 300 original problems in the first publication

Replaces reliance on memorization with the understanding brought by pattern recognition to new problems Supplements worked examples with synthesis strategy, green metrics analysis and novel research, where available, to help advanced students and researchers in choosing their next research project

The Geometry of René Descartes Bright Tutee This new book, after two years' discussion among 70 members in many countries, including the United States, Canada, Mexico, United Kingdom, Netherlands, Poland, Sweden, India, Pakistan, Bangladesh, Mali, Australia, and New Zealand, looks at the root causes of global problems and points the way to solutions. It explains the growing gap between rich and poor, offers routes to greater democracy, exposes the global corporate

oligarchy, addresses the tyranny of the banking structure, details the concentrated control of media, explores spiritual approaches to sustainable living, and suggests solutions through civil society, alternative life styles, education, and useful information sources. "Global Solutions is an impressive, well-researched and honest summary of our sorry global predicament which provides vehicles for achieving practical solutions ." -John Bunzl of London, England, founder, International Simultaneous Policy Organisation "I think that humane and concerned world citizens, of all faiths or none, can welcome this book's commitment to our common quest for sensitive celebration of humanity and our world with justice and mature

tolerance." -Doug Everingham, former Australian Minister for Health "I have to say WOW! Chapter 7 - Solutions Bright Tutee

The second edition of the best-selling Python book in the world (over 1 million copies sold!). A fast-paced, no-nonsense guide to programming in Python. Updated and thoroughly revised to reflect the latest in Python code and practices. Python Crash Course is the world's best-selling guide to the Python programming language. This fast-paced, thorough introduction to programming with Python will have you writing programs, solving problems, and making things that work in no time. In the first

half of the book, you'll learn basic programming concepts, such as variables, lists, classes, and loops, and practice writing clean code with exercises for each topic. You'll also learn how to make your programs interactive and test your code safely before adding it to a project. In the second half, you'll put your new knowledge into practice with three substantial projects: a Space Invaders-inspired arcade game, a set of data visualizations with Python's handy libraries, and a simple web app you can deploy online. As you work through the book, you'll learn how to:

- Use powerful Python libraries and tools, including Pygame, Matplotlib, Plotly, and Django
- Make 2D games that respond to keypresses and mouse clicks, and that increase in difficulty
- Use data to generate interactive visualizations
- Create and customize web apps and deploy them safely online
- Deal with mistakes and errors so you can

solve your own programming problems. If you've been thinking about digging into programming, Python Crash Course will get you writing real programs fast. Why wait any longer? Start your engines and code!
