EARN SERIOUS TRADING PROFITS BY USING YOUR WHOLE BRAIN! Legendary traders like Jesse Livermore, George Soros, Richard Dennis, and Steven Cohen use their full range of powers that encompass both instinct and analysis. That ' s how they

made their fortunes – and that ' s how you can, too. In Trading from Your Gut, Curtis Faith, renowned trader and author of the global bestseller Way of the Turtle, reveals why human intuition is an amazingly powerful trading tool, capable of processing thousands of inputs almost instantaneously. Faith teaches you how to harness, sharpen, train, and trust your instincts and to trade smarter with your whole mind. Just as important, you ' ll learn when not to trust your gut – and how to complement your intuition with systematic analysis. You ' ve got a left brain: analytical and rational. You ' ve got a right brain: intuitive and holistic. Use them both to make better trades, and more money! “ Whole Mind ” trading: the best of discretionary and system approaches How winning traders use analysis and disciplined intuition together How to profit from other traders ' “ Wrong Brain Thinking ” Understand other traders,

without acting like them How to provide a firm intellectual framework for your trades What successful traders have discovered about the market 's structure and laws The unique value of intuition in swing trading Use your intuition to trade patterns that computer technology can ' t recognize

Computer Vision Metrics provides an extensive survey and analysis of over 100 current and historical feature description and machine vision methods, with a detailed taxonomy for local, regional and global features. This book provides necessary background to develop intuition about why interest point detectors and feature descriptors actually work, how they are designed, with observations about tuning the methods for achieving robustness and invariance targets for specific applications. The survey is broader than it is deep, with over 540 references provided to dig deeper. The taxonomy includes search methods, spectra components, descriptor representation, shape, distance functions, accuracy, efficiency, robustness and invariance attributes, and more. Rather than providing 'how-to' source code examples and shortcuts, this book provides a counterpoint discussion to the many fine opencv community source code resources available for hands-on practitioners.
