This book shows how to consistently obtain annual and multiannual manufacturing target profit regardless of the evolution of sales volumes, increasing or decreasing, using the Manufacturing Cost Policy Deployment (MCPD) system. Managers and practitioners within the manufacturing companies will discover a practical approach within the MCPD system that will help them develop and support their long-term, medium-term, and short-term profitability and productivity strategy. The book presents both the basic concepts of MCPD and the key elements of transforming manufacturing companies through MCPD system, as well as supporting the consistent growth of external and internal profit by directing all systematic and systemic improvements based on meeting the annual and multiannual Manufacturing Cost Improvement (MCI) targets and means for each Product-Family Cost (PFC). This book is unique because it presents two types of systematic and systemic improvement projects for MCI that have been applied over the years in various multinational manufacturing companies operating in highly competitive markets, in order to address the consistent reduction of unit manufacturing costs by improving the Cost of Losses and Waste (CLW). Readers will discover the practical approach of MCI based on a structured approach to MCPD system beyond the traditional approach to manufacturing improvements based mainly on improved time and quality. Therefore, from the perspective of the MCPD system, the multiannual manufacturing target profits are met while the annual and multiannual manufacturing target costs are a predetermined stake and not a result of the improvements already made.

After decades of declining profitability, China's industrial state-owned enterprises appear obsolete. This study relies on extensive data and quantitative analysis to examine the reasons for the decline in profitability, to ascertain their current profitability patterns across various dimensions, and to account for any profitability gap with enterprises in other ownership forms. Recent reform measures are also evaluated. A differentiated picture emerges which seeks to make past developments comprehensible and illuminate the prospects of the reform of industrial state-owned enterprises in China. "This book is intended to drive home the fundamental ideas of managerial accounting and motivate students to actually want to study the subject. As you will see, the text has a number of unique features that help accomplish these goals. Based on my teaching experience and from what we have heard from professors using the previous editions, we believe students and professors want a textbook that: Recognizes that most students will become managers, not accountants Focuses attention on decision making Stresses the fact that "You Get What You Measure" Motivates students to learn managerial accounting by connecting concepts and techniques to the real world Recognizes the importance of service businesses Is clear, concise and current" Customer Relationship Marketing Kogan Page Publishers

An updated look at the role of economic profit analysis in the process of wealth creation Grant explains the pivotal role of economic value added (EVA) in the theory of finance, how to measure EVA with standard accounting adjustments, how to use EVA to value companies and their stock, and how to use economic profit principles to identify wealth-

creating firms, industries, and even market economies.

Understanding financial management is critical in today's global marketplace. Financial Management: A Practical Guide to Value Creation is designed for general managers, senior functional managers, and business students interested in the practice of financial management. The book introduces innovative techniques in a practical, intuitive way, but assumes no prior knowledge beyond a rudimentary understanding of financial statements. Unlike most texts, which are conceptual in nature, Financial Management: A Practical Guide to Value Creation ties concepts to reality. In fact, the concepts covered in each chapter are applied to an actual company, which reinforces the readers understanding of the subject matter. Practical examples are also integrated to demonstrate how the financial tools and techniques can be used to improve the decision making process. Financial Management: A Practical Guide to Value Creation underscores the principles of financial management, which are applicable to all companies. The book is organized into five sections. Part I begins with an articulation of the two basic questions that financial managers face: (1) What investments should the company make and (2) how should these capital expenditures be financed? In order to make sound investment decisions, the financial manager must be able to conduct a detailed financial analysis of the company. Through the analysis, the manager will develop an understanding of the company's past performance and the various forms of financing available for future endeavors. One of the first steps in conducting a detailed analysis is deconstructing the financial statements. As a result, Chapter 2 explains and illustrates how a company's financial statements are constructed, deconstructed, and interpreted. Part II reviews the techniques managers use to assess a company's current financial health, plan its future development, and make decisions designed to improve its probability for success. Chapter 3 demonstrates the methods used to conduct a detailed financial analysis of a firm's liquidity position, operational efficiency, and management effectiveness. Chapter 4 explores financial planning and forecasting with particular emphasis on managing a company's growth potential. Time value of money is the process of calculating the value of an investment yesterday, today, and tomorrow. Time value concepts underlie virtually every topic in financial management, including capital budgeting and capital structure. In fact, a rudimentary understanding of these concepts is needed when evaluating different capital expenditures and determining the most appropriate

financing source. For this reason, Chapters 5 and 6 in Part III are dedicated to time value of money. Part IV demonstrates how managers make investment decisions (i.e., capital budgeting) that maximize the firm's value. Chapter 7 explores the net present value (NPV) rule and how to apply this technique to make value-enhancing investment decisions. A number of alternative approaches, including the internal rate of return (IRR), payback period, and profitability index are also explored. Chapter 8 illustrates how to estimate the cash flow generated by an investment proposal and assess the proposal's capacity to create value. Chapter 9 demonstrates the methods used to estimate the cost of capital, which is used as a hurdle rate in evaluating the cash flows generated by the investment. The value added through effective investment and financing decisions will make the company more appealing to investors. Part V provides the measures of risk and return used by a company's various capital providers to evaluate firm performance.

Although conventional cogeneration systems have been used successfully in the last two decades, most of them have been large units using mainly hydrocarbon fuels that are becoming increasingly expensive. New cogeneration systems based on fuel cells and sorption air conditioning systems promise to be an energy-saving alternative for situations when cooling, heating and power are needed at low and medium capacities. *Cogeneration Fuel Cell-Sorption Air Conditioning Systems* examines the thermodynamic principles of fuel cell performance and sorption air conditioning systems, and gives relevant information about the state of the art of these technologies. It also provides the reader with the theoretical bases and knowledge needed to understand the operation of these new cogeneration systems, as well as discussing the design basis and economical evaluation. Topics covered include: • selected fuel cells for cogeneration CHP processes; • state-of-the-art sorption refrigeration systems; • potential applications in demonstration projects; and • profitability assessment of the cogeneration system. *Air conditioning and fuel cell engineers; postgraduates and researchers in energy fields; and designers of cooling, heating and power cogeneration systems will find* *Cogeneration Fuel Cell-Sorption Air Conditioning Systems* a useful and informative reference.

Cost of Capital John Wiley & Sons

The rapid globalization of capital markets has increased attention toward examining the quality of the disclosure practices implemented by companies, as internationalization and globalization are the most important motives of the harmonization of financial statements preparation and presentation. Given the expansion of trade and the openness to foreign capital markets, investment decisions became not limited only for local users, but also international users may need to access the financial information. The issuance of International Financial Reporting Standards (IFRS) to be used throughout the world aims to improve the comparability and understandability

of financial statements, and hence, to enhance investment decisions through helping investors across the borders to invest in multinational companies. Although fluid and under-developed institutional arrangements remain central features of emerging markets, ensuring effective corporate governance mechanisms would indeed support companies in complying with IFRS – the latter imposes a challenge for companies operating in emerging markets. This book evaluates the differences in the level of compliance with IFRS across the GCC states, exploring the impact of corporate governance on the level of compliance with IFRS and presenting an empirical analysis of companies across the GCC. It makes an important contribution by providing a detailed empirical analysis of the interplay between corporate governance and IFRS in emerging market setting and highlights the way for future research. It will provide international business, management, and accounting and finance students and senior practitioners with a completely new and updated guide to the work in the field of corporate governance and IFRS compliance in emerging markets.
