How is the future world energy demand to be met? The rates of use of the fossil fuels — coal, oil and natural gas — are increasing all over the world. The remaining stocks are finite and are not renewable. This book considers the various options of renewable energy, including water energy, wind energy and biomass, solar thermal and solar photovoltaic energy. And should the nuclear option remain open? The work also examines the environmental implications and economic viability of all fossil and renewable sources, introduces more distant future options of geothermal energy and nuclear

fusion, and discusses a near-future energy strategy.

In this introductory volume, readers will learn about the vital role that the various Critical Infrastructure (CI) sectors play in America, in the context of homeland security. The protection, maintenance, and monitoring of these interdependent CI assets is a shared responsibility of governments, private sector owner/operators, first responders, and all those involved in

homeland security and emergency management. As this foundational learning resource demonstrates, rapidly advancing technologies combined with exponential growth in demand on the aging infrastructure of America's power grid is setting the stage for a potentially catastrophic collapse that would paralyze each and every facet of civilian life and military operations. This meticulously researched primer will guide readers through the known world of power failures and cyber-attacks to the emerging threat from a High-altitude Electromagnetic Pulse (HEMP). A HEMP would cause cascading failures in the power grid, communications, water treatment facilities, oil refineries, pipelines, banking, supply chain management, food production, air traffic control, and all forms of transportation. Each chapter in America's Greatest Existential Threat (Vol. 1) begins with learning objectives and ends with a series of review questions to assess take-up of the chapter material. Similarly, subsequent volumes will explore HEMP and emerging issues in closer detail with current research and analysis now in development.
