Scientific philosophers examine the nature and significance of levels of organization, a core structural principle in the biological sciences. This volume examines the idea of levels of organization as a distinct object of investigation, considering its merits as a core organizational principle for the scientific image of the natural world. It approaches levels of organization--roughly, the idea that the natural world is segregated into part-whole relationships of increasing spatiotemporal scale and complexity--in terms of its roles in scientific reasoning as a dynamic, open-ended idea capable of performing multiple overlapping functions in distinct empirical settings. The contributors--scientific philosophers with longstanding ties to the biological sciences--discuss topics including the philosophical and scientific contexts for an inquiry into levels; whether the concept can actually deliver on its organizational promises; the role of levels in the development and evolution of complex

systems; conditional independence and downward causation; and the extension of the concept into the sociocultural realm. Taken together, the contributions embrace the diverse usages of the term as aspects of the big picture of levels of organization. Contributors Jan Baedke, Robert W. Batterman, Daniel S. Brooks, James DiFrisco, Markus I. Eronen, Carl Gillett, Sara Green, James Griesemer, Alan C. Love, Angela Potochnik, Thomas Reydon, Ilya Tëmkin, Jon Umerez, William C. Wimsatt, James Woodward

*Conceptualising Concepts in Greek Philosophy* David C Cook

Concepts are basic features of rationality. Debates surrounding them have been central to the study of philosophy in the medieval and modern periods, as well as in the analytical and Continental traditions. This book studies ancient Greek approaches to the various notions of concept, exploring the early history of conceptual theory and its associated philosophical debates from the end of the archaic age to the end of antiquity. When and how did the notion of concept emerge and evolve, what questions were raised by ancient philosophers in the Greco-Roman tradition about concepts, and what were the theoretical presuppositions that made the emergence of a notion of concept possible? The volume furthers our own contemporary understanding of the nature of concepts, concept formation, and concept use. This title is part of the Flip

Evagrius of Pontus (ca. 345-399) was a Greek-speaking monastic thinker and Christian theologian whose works formed the basis for much later reflection on monastic practice and thought in the Christian Near East, in Byzantium, and in the Latin West. His innovative collections of short chapters meant for meditation, scriptural commentaries in the form of scholia, extended discourses, and letters were widely translated and copied. Condemned posthumously by two ecumenical councils as a heretic along with Origen and Didymus of Alexandria, he was revered among Christians to the east of the Byzantine Empire, in Syria and Armenia, while only some of his writings endured in the Latin and Greek churches. A student of the famed bishop-theologians Gregory of Nazianzus and Basil of Caesarea, Evagrius left the service of the urban church and settled in an Egyptian monastic compound. His teachers were veteran monks schooled in the tradition of Clement of Alexandria, Origen, and Anthony, and he enriched their legacy with the experience of the desert and with insight drawn from the entire Greek philosophical tradition, from Plato and Aristotle through Iamblichus. *Evagrius and His Legacy* brings together essays by eminent scholars who explore selected aspects of Evagrius's life and times and address his far-flung and controversial but long-lasting influence on Latin, Byzantine, and Syriac cultures in antiquity and the Middle Ages. Touching on points relevant to theology, philosophy,

history, patristics, literary studies, and manuscript studies, Evagrius and His Legacy is also intended to catalyze further study of Evagrius within as large a context as possible.
