The global food crises of 2008 and 2010 and the increased price volatility revolve around biofuels policies and their interaction with each other, farm policies and between countries. While a certain degree of research has been conducted on biofuel efficacy and logistics, there is currently no book on the market devoted to the economics of biofuel policies. The Economics of Biofuel Policies focuses on the role of biofuel policies in creating turmoil in the world grains and oilseed markets since 2006. This new volume is the first to put together theory and empirical evidence of how biofuel policies created a link between crop (food grains and oilseeds) and biofuel (ethanol and biodiesel) prices. This combined with biofuel policies role in affecting the link between biofuels and energy (gasoline, diesel and crude oil) prices will form the basis to show how alternative US, EU, and Brazilian biofuel policies have immense impacts on the level and volatility of food grain and oilseed prices.

At 5:20 in the afternoon on 9/11, Building 7 of the World Trade Center collapsed, even though it had not been struck by a plane and had fires on only a few floors. The reason for its collapse was considered a mystery. In August 2008, NIST (the National Institute of Standards and Technology) issued its report on WTC 7, declaring that "the reason for the collapse of World Trade Center 7 is no longer a mystery" and that "science is really behind what we have said." Showing that neither of these claims is true, David Ray Griffin demonstrates that NIST is guilty of the most serious types of scientific fraud: fabricating, falsifying, and ignoring evidence. He also shows that NIST's report left intact the central mystery: How could a building damaged by fire—not explosives—have come down in free fall?

*International Trade Law: Interdisciplinary Theory and Practice* has been completely revised in its Third Edition, building upon the global successes of its two predecessor editions. Truly a "world law" Textbook applicable in any of the approximately 152 WTO countries, the Third Edition places much emphasis on coverage of developing and least developed countries in Asia, Africa, and Latin America, highlighting the significance of their demographics, politics, culture, and economic dynamism. Europe and the high-profile trade disputes between the United States and the European Union is another chief focal point of this distinctively comprehensive book. Notably, the Textbook avoids two pitfalls: an American-centric approach, and the suggestion that international trade law is only about the WTO. The Textbook contains 50 Chapters dedicated to all aspects of the field, from ancient and medieval views about the morality of trade to the mysteries of adjustments to Constructed Export Price in a dumping margin calculation. The Textbook covers fully the Doha Round and the new, post-9/11 trade security rules. It includes 6 Chapters on free trade agreements (FTAs), 2 Chapters each on agriculture, services, and intellectual property (IP), and plenty of excerpts from key WTO and U.S. court cases. Overall, the Textbook is both a tour de force and user friendly. Not surprisingly, the Textbook has been used at roughly 100 law schools around the world, and translated into Vietnamese. Each chapter is manageably-sized and offers a user-friendly structure, allowing the flexibility of choosing the chapters that best serve the needs of a professor's individual course. The topics in each chapter help students establish a fundamental foundation upon which to build their knowledge of international trade law. Useful notes appear throughout the text, carefully constructed and organized to guide and challenge students, without abandoning them to trying to play "find-the-ball" on their own, piecemeal. The author sets forth five clear and fundamental themes in the preface which resonate throughout the text, providing not only coherence and integration, but also the passion that will ensure lively

classroom discussion and debate. The author covers hot topics, such as protectionism, regionalization, labor, the environment, and sanctions, from both a practical and theoretical standpoint. Interesting and substantive interdisciplinary readings provide further penetration of a subject on not only the economics of international trade law, but on perspectives brought to the field by political scientists, international relations specialists, and philosophers.

On the tenth anniversary of the September 11, 2001 terrorist attacks, David Ray Griffin reviews the troubling questions that remain unanswered 9/11 Ten Years Later is David Ray Griffin's tenth book about the tragic events of September 11, 2001. Asking in the first chapter whether 9/11 justified the war in Afghanistan, he explains why it did not. In the following three chapters, devoted to the destruction of the World Trade Center, Griffin asks why otherwise rational journalists have endorsed miracles (understood as events that contradict laws of science). Also, introducing the book's theme, Griffin points out that 9/11 has been categorized by some social scientists as a state crime against democracy. Turning next to debates within the 9/11 Truth Movement, Griffin reinforces his claim that the reported phone calls from the airliners were faked, and argues that the intensely debated issue about the Pentagon—whether it was struck by a Boeing 757—is quite unimportant. Finally, Griffin suggests that the basic faith of Americans is not Christianity but "nationalist faith"—which most fundamentally prevents Americans from examining evidence that 9/11 was orchestrated by U.S. leaders—and argues that the success thus far of the 9/11 state crime against democracy need not be permanent.
