Landscape architecture and  
architecture are two fields that

exist in close proximity to one  
another. Some have argued  
that the two are, in fact, one  
field. Others maintain that the  
disciplines are distinct. These  
designations are a subject of  
continual debate by theorists  
and practitioners alike. Here,  
David Leatherbarrow offers an  
entirely new way of thinking of  
architecture and landscape  
architecture. Moving beyond  
partisan arguments, he shows  
how the two disciplines rely  
upon one another to form a  
single framework of cultural  
meaning. Leatherbarrow  
redefines landscape

---

architecture and architecture as early modernism, to more topographical arts, the shared task of which is to accommodate and express the patterns of our lives.

Topography, in his view, incorporates terrain, built and unbuilt, but also traces of practical affairs, by means of which culture preserves and renews its typical situations and institutions. This rigorous argument is supported by nearly 100 illustrations, as well as examples of topography from the sixteenth, eighteenth, and nineteenth centuries, through the heroic period of

recent offerings. A number of these studies revise existing accounts of decisive moments in the history of these disciplines, particularly the birth of the informal garden, the emergence of continuous space in the landscapes and architecture of the modern period, and the new significance of landform or earthwork in contemporary architecture. For readers not directly involved with either of these professions, this book shows how over the centuries our lives have been shaped

and enriched by landscape and architecture. *Topographical Stories* provides a new paradigm for theorizing and practicing landscape and architecture.

This book chronicles the conceptual and methodological facets of psychiatry and medical psychology throughout history. There are no recent books covering so wide a time span. Many of the facets covered are pertinent to issues in general medicine, psychiatry, psychoanalysis, and the social sciences today. The divergent emphases and interpretations

Amid the burgeoning literature on the connections between the global north and the global south, Mecca of Revolution is a pure example of post-colonial, or "south-south," international history.

Through an examination of Algeria's interactions with the wider world, from

the beginning of its war of independence to the fall of its first post-colonial regime, the Third Worldist perspective on the twentieth century comes into view. Hitherto dominant historical paradigms such as the Cold War are situated in the larger context of decolonization and the re-inclusion of the large majority of humanity in international affairs. At the same time, groundbreaking research in the archives of Algeria

and a half-dozen other countries enable Mecca of Revolution to advance beyond the focus on discourse analysis that has typified previous studies of Third World internationalism. It demystifies terms like Non-Alignment, Afro-Asianism, and Bandung, and sheds new light on the relationships between the emergent elites of Africa, the Middle East, Asian, and Latin America. As one of the most prominent sites of post-colonial

---

socialist experimentation and an epicenter of transnational guerrilla activity, Algeria was at the heart of efforts to transform global political and economic structures. Yet, the book also shows how Third Worldism evolved from a subversive transnational phenomenon into a mode of elite cooperation that reinforced the authority of the post-colonial state. In so doing, the Third World movement played a key role in the construction of

the totalizing international order of the late-twentieth century. Ultimately, Mecca of Revolution shows the "post-colonial world" is all of our world.

Rosie may seem quiet during the day, but at night she's a brilliant inventor of gizmos and gadgets who dreams of becoming a great engineer. When her great-great-aunt Rose (Rosie the Riveter) comes for a visit and mentions her one

unfinished goal—to fly—Rosie sets to work building a contraption to make her aunt's dream come true. But when her contraption doesn't fly but rather hovers for a moment and then crashes, Rosie deems the invention a failure. On the contrary, Aunt Rose insists that Rosie's contraption was a raging success: you can only truly fail, she explains, if you quit. This book reviews the history of the United States-Liberia relations from the early 1820s to 2015, with particular attention paid to the role of the US armed forces. Contrary to most literature on the genesis and development of Liberia, this book demonstrates how US military power has been the primary influence shaping Liberia's history. This includes the role played by the US military in the founding of Liberia, the protection of the country during the European

formal colonial era, multiple covert operations in securing US-friendly administrations in Liberia, and direct military interventions when necessary to secure American interests in the region.
