Hi, I have a Canon compact cam that does not come with manual focus. I have

installed CHDK, but can't find how to do manual focus. Does CHDK have manual focus function?

**CHDK 1.2.0 User Manual**  
| **CHDK Wiki**  
| **Fandom**

CHDK is an experimental (and free) development tool, which

temporarily patches (supported) Canon cameras so that they can be controlled using scripts. The scripts are able to take pictures,

---

control the camera zoom, set the focus, and access many other camera features.

One of the very useful features of CHDK is its ability to focus the camera manually, either as part of a script or through the CHDK menus. While some Canon cameras have a built-in manual focus options, many do not.

Does CHDK enable manual focus?: Canon PowerShot Talk Forum ...

This could certainly be done with a CHDK script. Scripting is a good method for an end

user to create customized actions for the camera. However, you do have to enable CHDK and run the script for this to happen - it's not quite like a built-in transparent modification to how the camera works.

CHDK saves your last user-selected script parameters from one session to the next. The default script is the one you load when you don't need a script.

New scripts can be added to the SCRIPTS folder as they become available. Script shoot delay (.1s) After an image is captured, indicates how long to delay the execution of the next script command.

*powered by Wikia* CHDK currently has two official branches: The branch labelled 1.4.1 which is considered to be 'stable'. This branch is used for minor changes and bugfixes, backward compatibility between updates and has more stable code and behavior. The branch labelled 1.5.0, also called the "unstable" or development trunk.
