The piston engines that powered Second World War fighters, the men who designed them, and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first

global air war. Advanced jet engines may have been in development but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never before told story of a high-tech race, hidden behind the closed doors of design offices and intelligence agencies, to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished

memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers - the Secret Horsepower Race. Under the Hood CarTech Inc This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC

engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO<sub>2</sub> emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ' applications, followed by chapters on the challenges faced

by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Life has gotten a bit boring for Zuria Johnston, and with the exception of her Friday nights out with her best, flamboyant friend, Chase, and her job as a guidance counselor, she seems to have hit a rut. After a rough break-up with her longtime boyfriend, Manuel, her prospects of finding a man also seem pretty bleak. That is, until she connects with her poetic crush, Amir, and he opens her eyes to a world of romance and passion that she didn't know existed. She discovers what it feels like to be loved as a real woman should, and to overcome the

difficulties of being a young, strong, black woman who is afraid to have her heart broken for a second time. The thrill of new romance seems to fill the emptiness in her life, but her old life isn't as easy to escape as she first thought. Mistakes that she thought she had left behind threaten to undo everything that she has begun to build in this new chapter of her life, but she isn't the only one battling the demons of her past. The poetic and passionate Amir harbors some dark secrets of his own, and when the truth begins to come out, the connection between her two lovers, old and new, may end her short reign of happiness before it ever fully begun. With love from one man and

sworn vengeance from another, Zuria is trapped in the middle, trying desperately to make her way through the tangled troubles of family, love, and happiness. The problem is, she might lose more than the man of her dreams. As this complex and spellbinding story reaches its peak, Zuria will have to risk mind, body, and soul for herself and the people she loves, but will that final risk mean achieving the life she'd always dreamed of? Or will she end up making the ultimate sacrifice?

technology and industry, pointing out the mistakes he condemned in his time, the corruption and collapse he predicted, the ultimate price paid for silencing those who were not afraid to speak out. The story of this visionary engineer ' s life and work, as Loren Graham relates it, is also the story of the Soviet Union ' s industrial promise and failure. We meet Palchinsky in pre-Revolutionary Russia, immersed in protests against the miserable lot of laborers in the tsarist state, protests

destined to echo ironically during the Soviet worker ' s paradise. Exiled from the country, pardoned and welcomed back at the outbreak of World War I, the engineer joined the ranks of the Revolutionary government, only to find it no more open to criticism than the previous regime. His turbulent career offers us a window on debates over industrialization. Graham highlights the harsh irrationalities built into the Soviet system—the world ' s most inefficient steel mill

in Magnitogorsk, the gigantic and ill-conceived hydroelectric plant on the Dnieper River, the infamously cruel and mislocated construction of the White Sea Canal. Time and again, we see the effects of policies that ignore not only the workers ' and consumers ' needs but also sound management and engineering precepts. And we see Palchinsky ' s criticism and advice, persistently given, consistently ignored, continue to haunt the Soviet Union right up to its dissolution in
