Over the past few years, e-cigarettes such as Juul have taken over the market, rising in popularity among smokers and retailers. Originally marketed as a safer alternative to smoking, vaping may actually not be as harmless as first believed. As scientists debate the relative merits of e-cigarettes, policymakers have had to contend with a new reality: the rise in vaping among teenagers. The articles in this book evaluate the increasing prominence and regulation of the vaping industry, and media literacy questions and terms will enlighten readers to how news coverage of the topic has developed.

Mathematical modelling and simulation is an increasingly powerful area of mathematics and computer science, which in recent years has been fuelled by the unprecedented access to larger than ever stores of data. These techniques have an increasing number of applications in the professional

---

and political spheres, and people try to predict the results of certain courses of action as accurately as possible. **Computing Possible Futures** explores the use of models on everyday phenomena such as waiting in lines and driving a car, before expanding the model's complexity to look at how large-scale computational models can help imagine big scale "scenarios like the effect self-driving cars on the US economy. The successes and failures of complex real world problems are examined, and it is shown how few, if any, failures are due to model errors or computational difficulties. It is also shown how real life decision makers have addressed important problems and used their model-based understanding of possible futures to inform these decisions. Written in an entertaining and accessible way, **Computing Possible Futures** will help those concerned about the

futurity of their decisions to understand what fundamentally needs to be done, why it needs to be done, and how to do it. **Lemon-Aid Used Cars and Trucks 2010-2011** Consumer Guide Books Pub Steers buyers through the the confusion and anxiety of new and used vehicle purchases like no other car-and-truck book on the market. Detective Jack Caffery hunts a twisted carjacker in this Edgar Award-winning thriller from the “maestro of the sinister” and author of *Birdman* (New York Daily News). Jack Caffery’s new case seems like a routine carjacking until he realizes the sickening truth: The thief wasn’t after the car, but the eleven-year-old girl in the back seat. And she’s not the only young girl who’s been taken. Meanwhile, police diver Sgt. Flea Marley is pursuing her own theory of the case, and what she finds in an abandoned, half-submerged tunnel could put her in grave

danger. The carjacker is always one step ahead of the Major Crime Investigation Unit, and as the chances for the victims’ survival grow slimmer, Caffery and Marley race to fit the pieces together. With this award-winning entry in her acclaimed series set first in London, and now in Bristol, England, “Hayder, again, proves expert at ratcheting up the tension” (The Independent). “It’s a tribute to Hayder’s powers as a suspense writer that she completely turns the over-familiar premise of this novel inside out and upside down.” —The Washington Post “Compelling . . . First-rate mystery that takes full advantage of the wintry, moonlit West Country and the unusual skills of its lady diver.” —Kirkus Reviews
