Naming Ionic Compounds Practice Worksheet

Ionic compounds are compounds in which ions are attracted to one another due to the fact that one sort of ion has a positive charge (the cation) and another has a negative charge (the anion).¹ Sodium chloride is an example of an ionic solid: Each sodium cation attracts chlorine anions to it, and vice-versa.

We're now posting original research! Yes, as of late November we are hosting our own original study titled An Examination of the Effect of Prior Experience, Age, and Gender in Non-Food Blending Predictions. Though this title sounds pretty scientific, it just refers to an experiment I did with putting rubber balls in a blender to see...

Intro to Ionic Compounds | The Cavalcade
o' Chemistry

After all, if you do a great job of naming your ionic compound but the compound is actually covalent, you still won't get the answer right. If you'll recall the tutorial about ionic compounds, ionic compounds are compounds in which cations (ions with positive charge) are attracted to anions

(ions with negative charge) in great big crystals.
