What do nylon stockings and atomic bombs have in common? DuPont. The chemical firm of DuPont de Nemours pioneered the development of both nylon and plutonium, playing an important role in the rise of mass consumption and the emergence of the notorious “military-industrial complex.” In this fascinating account of the lives and careers of Du Pont’s chemical engineers, Pap A. Ndiaye deftly illustrates the contribution of

industry to the genesis of a dominant post – World War II “American model” connecting prosperity with security. The consumer and military dimensions of twentieth-century American history are often studied separately. Ndiaye reunites them by examining Du Pont's development of nylon, which symbolized a new way of life, and plutonium, which was synonymous with annihilation. Reflecting on the experiences and contributions of the company's engineers and physicists, Ndiaye traces Du Pont's transformation into one of the corporate models of American success.

and myriad details on current chemical processes, products, and practices. No other source offers as much data on the chemistry, engineering, economics, and infrastructure of the industry. The two volume Handbook serves a spectrum of individuals, from those who are directly involved in the chemical industry to others in related industries and activities. Industrial processes and products can be much enhanced through observing the tenets and applying the methodologies found in the book's new chapters.

Second International Conference on Chemical Engineering Education presents the situation in chemical engineering education in Germany, Hungary, Spain, Japan, and in the United States. This book depicts an awareness of the problems of professional education together with a wide spectrum of opinions on their solution. Organized into 39 chapters, this book begins with an overview of the actual

situation of chemical engineering education program in Spain. This text then examines the detailed formalities of chemical engineering in secondary schools. Other chapters consider the change in chemical engineering education in Japan due to the change of chemical industries as well as by a great change of students' attitude. This book discusses as well the curriculum proposal for the education of undergraduate and graduate levels as well as foreign students' education. The final chapter reviews the European situation of chemical engineering education system. This book is a valuable resource for teachers and students of chemical engineering.
