What do nylon stockings and atomic bombs have in common? DuPont. The chemical firm of DuPont de Nemours pioneered the development of both nylon and plutonium, playing an important role in the rise of mass consumption and the emergence of the notorious "military-industrial complex." In this fascinating account of the lives and careers of Du Pont's chemical engineers, Pap A. Ndiaye deftly illustrates the contribution of industry to the genesis of a dominant post-World War II "American model" connecting prosperity with security. The consumer and military dimensions of twentieth-century American history are often studied separately. Ndiaye reunites them by examining Du Pont's development of nylon, which symbolized a new way of life, and plutonium, which was synonymous with annihilation. Reflecting on the experiences and contributions of the company's engineers and physicists, Ndiaye traces Du Pont's transformation into one of the corporate models of American success.

The current state of engineering graduate study in the United States, its future, and its relationship to research are examined in this report of the National Research Council Committee on the Education and Utilization of the Engineer. The study focuses principally on increasing the supply of highly qualified doctoral recipients who are United States citizens particularly with respect to academic employment. It also gives attention to the importance of master's level work and to the need for access to part-time programs for engineers who are employed full time. Report sections include: (1) an executive summary; (2) the background (reviewing previous reports and studies in engineering education); (3) supply and demand (providing data on the supply of Ph.D.s and recommendations for increasing the supply); (4) women and minorities in engineering (examining representation patterns); (5) master's degree (presenting findings and recommendations); (6) doctor's degree (with findings and recommendations); (7) nontraditional graduate programs (analyzing existing approaches); (8) engineering faculty (addressing needs for faculty development); and (9) university-industry interactions (discussing conflicting and complementary interests). A list of 66 reference notes is included. (ML)
