Engineers who need to have a better understanding of chemistry will benefit from this accessible book. It places a stronger emphasis on outcomes assessment, which is the driving force for many of the new features. Each section

focuses on the development and assessment of one or two specific objectives. Within each section, a specific objective is included, an anticipatory set to orient the reader, content discussion from established authors, and guided practice problems for relevant objectives. These features are followed by a set of independent practice problems. The expanded Making it Real feature showcases topics of current interest relating to the subject at hand such as chemical forensics and more medical related topics. Numerous worked examples in the text now include Analysis and Synthesis sections, which allow engineers to explore concepts in greater depth, and discuss outside relevance. An Introduction to Chemistry Macmillan Chemistry: The Molecular Nature of Matter, 8th Edition continues to focus on the intimate relationship between structure at the

atomic/molecular level and the observable macroscopic properties of matter. Key revisions focus on three areas: The deliberate inclusion of more, and updated, real-world examples to provide students with a significant relationship of their experiences with the science of chemistry. Simultaneously, examples and questions have been updated to align them with career concepts relevant to the environmental, engineering, biological, pharmaceutical and medical sciences. Providing students with transferable skills, with a focus on integrating metacognition and three-dimensional learning into the text. When students know what they know they are better able to learn and incorporate the material. Providing a total solution through WileyPLUS with online assessment, answer-specific responses, and additional practice resources. The 8th edition continues to emphasize the importance of applying concepts to problem solving to achieve high-level learning and increase retention of chemistry knowledge. Problems are arranged in a confidence-building order.
