Many people are convinced that, among other courses taught in schools, chemistry is a difficult and complex subject. This book sets out to introduce chemistry concepts and demystify chemistry showing how it is a major part of our everyday lives. It introduces the readers into the wonderful world of atoms and

molecules and chemical reactions whilst showing that chemistry is centrally important but also an emerging science and defines what the practising chemist does. The book also examines curiosity, creativity, fascination, poetry, beauty, and ethics in science. The concepts of chemistry are to be understood first and then learned. Accordingly, the book presents arguments and suggestions to be considered when teaching chemistry in secondary schools, together with a simple teaching approach so that students can understand and come to appreciate the language of chemistry and its experimental practices. Originally published in Italian, 'Chimica - leggere e scrivere il libro della Natura' was among the finalists of the 2013 Italian Award for popularization of science. The English translation has been sensitively achieved to enable the book to reach young students and teachers of chemistry in a positive way.

"This book is for you, and every text feature is meant to help you learn and succeed in your chemistry course. I wrote this book with two main goals for you in mind: to see chemistry as you never have before and to develop the problem-solving skills you need to succeed in chemistry. I want you to experience chemistry in a new way. I have written each chapter to show you that chemistry is not just something that happens in a laboratory; chemistry surrounds you at every moment. Several outstanding artists have helped me to develop photographs and art that will help you visualize the molecular world. From the

opening example to the closing chapter, you will see chemistry. My hope is that when you finish this course, you will think differently about your world because you understand the molecular interactions that underlie everything around you. My second goal is for you to develop problem-solving skills. No one succeeds in chemistry-or in life, really-without the ability to solve problems. I can't give you a one-size-fits-all formula for problem solving, but I can and do give you strategies that will help you develop the chemical intuition you need to understand chemical reasoning"--
