[PAUL AND THE DISPERSION](#) The Teachers Edition Paul and The Dispersion is for Bible students. Maps are provided for students to follow Paul's journeys to foreign nations. By tracing his land and sea voyages, students will learn the reason why Paul carried Jesus' name to those far off places. Students will discover exactly to whom Paul was sent by Jesus. For example, Paul also evangelized Jews in their synagogues. (Acts 9:20; 17:1,2; Romans 1:16) They were Jews who had scattered from Israel many years before and who are also known as The Dispersion. This is rarely or never emphasized by traditional teaching, a teaching that emphasizes Paul's apostleship to Gentiles only. What was special about Paul that enabled him to teach in synagogues? First, Paul was a Jew himself and would know Jewish laws, customs and history. He spoke their Hebrew language and possibly Greek. He was able to communicate directly with them. Secondly, Paul was a Pharisee and knew God's law cold. (Acts 22:2, 3) He was able to quote Hebrew scripture, the Christians Old Testament. (Isaiah 59:20; Romans 11:26) Students will find that there is overwhelming Biblical evidence that Paul was not solely an apostle to Gentiles but that he was also sent out to Jews who had scattered to foreign nations. Then, ask yourself this: Why would a non-Jew, Gentile, be expected to know or have an interest in a Jewish God's Bible and follow Paul's teaching? Did Paul turn Gentiles away? By no means! He did not turn away his vital travel companion, Aristarchus, when he asked for help. (Acts 16:9; 27:2) Jews of the Dispersion had scattered and worshipped in their Synagogues at Damascus, Salamis, Antioch of Pisidia, Iconium, Philippi, Thessalonica, Berea, Athens, Corinth, Ephesus.

Cambridge International AS and A Level Chemistry Coursebook with CD-ROM Cambridge University Press
Research in science education has recognized the importance of history and philosophy of science (HPS). Nature of science (NOS) is considered to be an essential part of HPS with important implications for teaching science. The role played by textbooks in developing students' informed conceptions of NOS has been a source of considerable interest for science educators. In some parts of the world, textbooks become the curriculum and determine to a great extent what is taught and learned in the classroom. Given this background and interest, this monograph has evaluated NOS in university level general chemistry textbooks published in U.S.A. Most textbooks in this study provided little insight with respect to the nine criteria used for evaluating NOS. Some of the textbooks, however, inevitably refer to HPS and thus provide guidelines for future textbooks. A few of the textbooks go into considerable detail to present the atomic models of Dalton, Thomson, Rutherford, Bohr and wave mechanical to illustrate the tentative nature of scientific theories --- an important NOS aspect. These results lead to the question: Are we teaching science as practiced by scientists? An answer to this question can help us to understand the importance of NOS, by providing students an HPS-based environment, so that they too (just like the scientists) feel the thrill and excitement of discovering new things. This monograph provides students and teachers guidelines for introducing various aspects of NOS, based on historical episodes.
