Chemistry is the study of matter and energy and the interactions between them.

This is also the definition for physics, by the way. Chemistry and physics are specializations of physical science. Chemistry tends to focus on the properties of substances and the interactions between different types of matter, particularly reactions that involve electrons. Physics tends to focus more on the nuclear part of the atom, as well as the subatomic realm.

Chapter 1.1 Flashcards | Quizlet

Chemistry - The Study Of Matter Science in its totality is the study of the objects, surroundings and various natural events and their effects based on experiments and observations. It encompasses a systematic

and logical approach towards the behavior of changes around us and the events concerned with them.

Chemistry also studies the properties of matter at a larger scale (for example, astrochemistry) and the reactions of matter at a larger scale (for example, technical chemistry), but typically, explanations and predictions are related back to the underlying atomic structure, giving more emphasis on the methods for the identification of molecules and their mechanisms of transformation

than any other science.
