This General, Organic and Biochemistry text has been written for students preparing for careers in health-related fields such as nursing, dental hygiene, nutrition, medical technology and occupational therapy. It is also suited for students majoring in other fields where it is important to have an understanding of the basics of chemistry. Students need have no previous background in chemistry, but should possess basic math skills. Raymond was crafted to take advantage of recent trends in the GOB market. It is a shorter, lighter book with a new, integrated table of contents that develops general, organic, and biochemistry topics together, rather than in isolation. In introducing GOB material, this text uses an integrated approach in which related general chemistry, organic chemistry, and biochemistry topics are presented in adjacent chapters. This approach helps students see the strong connections that exist between these three branches of chemistry, and allows instructors to discuss these, interrelationships while the material is still fresh in students' minds. This integration involves the following sets of chapters: * Chapter 3 (Compounds) and Chapter 4 (An Introduction to Organic Compounds). An introduction to bonding and compounds is followed by a look at the members of a few key organic families. * Chapters 3, 4 and 6.(Reactions).. A study of inorganic.and organic compounds is followed (after a look at gases, liquids, and solids in Chapter 5) by an introduction to their reactions. * Chapter 7 (Solutions) and Chapter 8 (Lipids and Membranes) A discussion.of solubility is followed by a look at the importance of solubility in biochemistry. Some reactions from Chapter 6 are reintroduced. * Chapter 9.(Acids and Bases) and Chapter 10 (Carboxylic Acids, Phenols and Amines) Principles of acid/base Chemistry

from an inorganic perspective are followed by a chapter on the organic and biochemical aspects of this topic. * Chapter 11 (Alcohols, Aldehydes and Ketones) and Chapter 12 (Carbohydrates). An introduction to the chemistry of alcohols, aldehydes and ketones is followed by a presentation of related biochemical applications. *Excel Science Study Guide Years 9-10* John Wiley & Sons The perfect way to prepare for exams, build problem-solving skills, and get the grade you want! Offering detailed solutions to all in-text and end-of-chapter problems, this comprehensive guide helps you achieve a deeper intuitive understanding of chapter material through constant reinforcement and practice. The result is much better preparation for in-class quizzes and tests, as well as for national standardized tests such as the DAT and MCAT. The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon, as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon-buckyballs, graphite, and diamond-are illustrated at the left, as is the molecule methane, CH₄, from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane, found in natural gas, to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement.
