This manual contains chemistry laboratory experiments that are adaptable for use by tribal colleges and community colleges. It was created for a two-semester General, Organic, and Biochemistry course sequence at Nebraska's two tribal colleges over a period of four years. While the authors see chemistry everywhere, we developed these connections to tribal community topics to help students to see the chemistry of everyday life and to find intellectual satisfaction and enjoyment while doing so. The labs can be performed by students alone or in pairs and will require about 2.5 hours to complete if the reagents and materials are ready. All labs have background information, community connections, the lab protocols and procedures, and suggestions for the lab report.

The laboratory course described in the lab manual emphasizes experimental design, data analysis, and problem solving. Inherent in the design is the emphasis on communication skills, both written and oral. Students work in groups on open-ended projects in which they are given an initial scenario and then asked to investigate a problem. There are no formalized instructions and students must plan and carry out their own investigations. Laboratory Manual John Wiley & Sons Suitable for one- or two-term lab courses covering general, organic, and biological chemistry, this new edition written by Karen Timberlake features many improvements to the insightful experiments that have made it the leading lab manual. Each experiment encourages critical thinking with laboratory goals, discussion of related concepts, clear instructions, new pre-lab questions, and comprehensive report pages. Forty-one experiments illustrate the basic principles of chemistry.

Write Like a Chemist John Wiley & Sons Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all student have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum--and how that can be accomplished.

Principles of Chemistry uses a mastery-learning paradigm designed to bring students to an excellent grasp of concepts and skills. The author's conversational style is a favorite with students, and combined with a special skill for lucidity

and detail, this text is what has been sorely missing from education. Students also appreciate the smaller profile and lighter weight of our books--something everyone notices immediately. This is possible because of the text covers an amount that can reasonably be covered in one year, rather than being stuffed with unnecessary chapters. The history of modern chemistry, mathematics and technical communication is emphasized throughout to effect the integration of chemistry with other subjects. Integration preserves a course from feeling compartmentalized and not relevant to other subjects. That's certainly not how the real world is. Real chemists use math and writing skills, and their field is greatly enhanced by their knowledge of the lineage of great scientists upon whose shoulders they stand. All Centripetal Press texts are rigorously reviewed and vetted by professional scientists. This text is recommended for students with a minimum math competency of Algebra II due to the appearance of logarithmic calculation when learning about pH values. Otherwise, math skills only involve basic formula solutions. Companion Resources for General Chemistry Principles of Chemistry: Solutions Manual for worked-out answers to all calculation problems. Principles of Chemistry: Resource CD includes chapter tests, answer keys and other resources. Chemistry Experiments for High School Students contains complete instructions and materials lists for 20 experiments.
