experience teacher of chemistry who wants to extend the range of strategies and approaches used, a biologist or physicist who has to teach chemistry, or a student training to be a teacher. Each chapter covers a broad section of the curriculum and is divided into topics. For each topic the book covers:

- The pupil's possible Previous knowledge
- A suggested Teaching sequence with activities necessary to cover the basic physics
- Warnings about pupils' misconceptions, common problems with individual activities and safety issues
- Further activities that develop the pupils' understanding of

the topic - Enhancement ideas that relate the science to everyday contexts and provide new ideas for experienced teachers

- Suggestions for using ICT

This second edition reflects the requirements of current secondary science curricula, ideas from recent curriculum development projects and innovations in IT. This book draws on the experience of a wide range of teachers and those involved in science education. It has been produced as part of the Association for Science Education's commitment to supporting science teacher by disseminating best practice and new ideas to enhance teaching.

Two years before adopting seven-year-old
Keydell from a group home for young boys,
Kim made a vow before the Dalai Lama to
become a bodhisattva: one who cultivates
an enlightened mind, is free from delusion,
and practices kindness and compassion
above all else. However, she struggles with
this practice as her new son's challenged
mind sends him into fits of rage and
violence, while seemingly allowing him to
feel no remorse for his actions. His
behaviors go against everything Kim
believes in, but she is determined to keep
her chocolate-eyed boy safely in the home
she has created with her husband and two
biological children. As she tries everything

she can to get Keydell the help he needs, she
must also learn to accept him exactly as he
is: a tiger in the home of elephants. This
vulnerable and touching account highlights
the interplay between desire and reality,
denial and acceptance, struggle and
enlightenment. As the minds of this mother
and her extraordinary son awaken - Kim's
through her Buddhist practice, and Keydell's
through the science of neurofeedback - we
witness the power of love and compassion to
overcome even the greatest odds."

Bringing together a wide collection of ideas,
reviews, analyses and new research on particulate
and structural concepts of matter, Concepts of
Matter in Science Education informs practice from
pre-school through graduate school learning and

teaching and aims to inspire progress in science education. The expert contributors offer a range of reviews and critical analyses of related literature and in-depth analysis of specific issues, as well as new research. Among the themes covered are learning progressions for teaching a particle model of matter, the mental models of both students and teachers of the particulate nature of matter, educational technology, chemical reactions and chemical phenomena, chemical structure and bonding, quantum chemistry and the history and philosophy of science relating to the particulate nature of matter. The book will benefit a wide audience including classroom practitioners and student teachers at every educational level, teacher educators and researchers in science education. "If gaining the precise meaning in particulate terms of what is solid, what is liquid, and that air is a gas, were that simple, we would not be confronted with another book which, while suggesting new approaches to teaching these topics, confirms they

are still very difficult for students to learn". Peter Fensham, Emeritus Professor Monash University, Adjunct Professor QUT (from the foreword to this book)

The roots of healthy development are nurtured when children's needs are met and they are allowed to experience life for themselves with guidance, not control. This is the foundation of the non-judgmental, emotionally connected style of parenting presented in "Growing From the Roots: A Practical Guide to the Art of Parenting". This book provides many down-to-earth parenting tools to help promote connections between parents and children as well as valuable examples that model how to communicate with children to support their growth into confident and compassionate adults. This is a comprehensive look at parenting; from helping our children gain self-esteem to how we

can get through the day without feeling we are going to explode! The author's own experiences as a mother, a child and family therapist and a preschool teacher contribute to a rich understanding of what parents and children experience, providing relevant and invaluable tools and support for parents of young children.

In *The Conversation That Matters Most*, DeWitt Rowe takes his readers on a unique and fascinating journey of self-exploration and discovery. The author not only guides us toward a complete reevaluation of how we view success; he convinces us that the way we define it and pursue it must also be reexamined. How often do we stop and question the assumptions that have defined us? Are we more intelligent than we have been led to believe? Do our idiosyncrasies make us strange...or simply unique? How often do we make a decision based on what's expected of us, rather than on our innate sense of what works? DeWitt delves into areas that are rarely discussed, areas that reward us with a richness

of comprehension, awareness, discovery, and wisdom. Every page is a reminder of the control we have over our lives if only we can understand how to use that control in a positive and result-oriented manner. Utilizing this book's guides and lessons, we can be assured of a fuller and more satisfying life.
