In *The X-Files* and *Philosophy*, thirty-six fearless philosophers seek for the truth which is out there, in here, at least somewhere, or (as the postmodernists claim) nowhere. One big issue is whether the weird and unexplained happenings, including the existence of entities unknown to traditional science, might really exist. And if they did, what would be the proper way to behave towards them? Some of these entities seem to flout conventional laws of nature—but perhaps we need to allow for different, as yet undiscovered, laws. If such fabulous entities really exist, what do we owe them? And if they don't exist, why do we imagine they do? In *The X-Files*, regular science is represented by Scully and usually turns out to be wrong, while open-minded credulity or pseudoscience is represented by Mulder and usually turns out to be right, or at least somehow on the right track. Scully demands objective, repeatable evidence, and she usually gets it, with Mulder's help, in astounding and unwelcome ways. What lessons should we take from the finding of *The X-Files* that respectable science is nearly always wrong and outrageous speculative imagination nearly always right?

A Visual Analogy Guide to Chemistry, 2e Sourcebooks, Inc.

A New York Times Bestseller From the New York Times bestselling author of *Five Total Strangers* and "master of suspense" (BCCB), Natalie D. Richards, comes a pulse-pounding YA thriller about a girl who goes on a mysterious scavenger hunt, only to discover that someone knows her worst secret...and is out for blood. I know seven dirty secrets: One caused the fall. One did nothing. One saw it all. One didn't care. One used their head. One played the hero. One was left for dead. On her eighteenth birthday, Cleo receives a mysterious invitation to a scavenger hunt. She's sure her best friend Hope or her brother Connor is behind it, but no one confesses. And as Cleo and Hope embark on the hunt, the seemingly random locations and clues begin to feel familiar. In fact, all of the clues seem to be about Cleo's dead boyfriend, Declan, who drowned on a group rafting trip exactly a year ago. A bracelet she bought him. A song he loved. A photo of the rafting group, taken just before Declan drowned. And then the phone calls start, Declan's voice taunting Cleo with a cryptic question: You ready? As the clock on the scavenger hunt ticks down, it becomes clear that someone knows what really happened to Declan. And that person will stop at nothing to make sure Cleo and her friends pay. Can they solve the hunt before someone else winds up dead? More twisty mysteries by Natalie D. Richards: *Five Total Strangers* *Six Months Later* *Gone Too Far* *One Was Lost* *My Secret to Tell* *What You Hide* *We All Fall Down*

Making Sense of Secondary Science Macmillan

What ideas do children hold about the natural world? How do these ideas affect their learning of science? When children begin secondary school they already have knowledge and ideas about many aspects of the natural world from their experiences both in primary classes and outside school. These ideas contribute to subsequent learning and research has shown that teaching is unlikely to be effective unless it takes learners' perspectives into account. *Making Sense of Secondary Science: Research into Children's Ideas* provides a concise, accessible summary of the research that has been done internationally in this area. The research findings are arranged in three main sections: life and living processes; materials and their properties; and physical processes. Much of this material has hitherto been difficult to access and its publication in this convenient form will be welcomed by all science teachers, both in initial training and in schools, who want to deepen their understanding of how their children think.

Teaching all of the necessary concepts within the constraints of a one-term chemistry course can be challenging. Authors Denise Guinn and Rebecca Brewer have drawn on their 14 years of experience with the one-term course to write a textbook that incorporates biochemistry and organic chemistry throughout each chapter, emphasizes cases related to allied health, and provides students with the practical quantitative skills they will need in their professional lives.

Essentials of General, Organic, and Biochemistry captures student interest from day one, with a focus on attention-getting applications relevant to health care professionals and as much pertinent chemistry as is reasonably possible in a one term course. Students value their experience with chemistry, getting a true sense of just how relevant it is to their chosen profession. When is the "right" time? How can I meet the demands of a professorship whilst caring for a young family? Choosing to become a mother has a profound effect on the career path of women holding academic positions, especially in the physical sciences. Yet many women successfully manage to do both. In this second edition, which is a project of the Women Chemists Committee (WCC) of the American Chemical Society (ACS), 40 inspirational personal accounts describe the challenges and rewards of combining motherhood with an academic career in chemistry. The authors are all women at different stages of their career and from a range of institution types, in both tenure and non-tenure track positions. The authors include women from different racial and ethnic backgrounds, who became mothers at different stages of their career, and who have a variety of family structures. Aimed at undergraduate and graduate students of chemistry, as well as postdoctoral fellows and early career faculty, these contributions serve as examples for women considering a career in academia but worry about how this can be balanced with other important aspects of life. The authors describe how they overcame particular challenges, but also highlight aspects of the system, which could be improved to accommodate women academics, and particularly encourage more women to take on academic positions in the sciences.

Moving away from the observation-and-vocabulary focus of traditional physical geology lab manuals, Peters and Davis's *Geology from Experience* offers experiments that

favor hands-on involvement and scientific problem-solving. Students are asked to use geological tools and techniques; analyze data from observation, experiment and research; solve simple equations; and make assessments and relevant predictions. This approach, class-tested with great success by the authors, gives students a real taste of the scientific experience by revealing the ways geologists actually do their work.

In this fresh and engaging guide to chemistry, Dr. Kate Biberdorf, aka "Kate the Chemist," reveals the fascinating science we experience every day. Have you ever wondered what makes dough rise? Or how your morning coffee gives you that energy boost? Or why your shampoo is making your hair look greasy? The answer is chemistry. From the moment we wake up until the time we go to sleep (and even while we sleep), chemistry is at work—and it doesn't take a PhD in science to understand it. Dr. Biberdorf has appeared on TV programs from the Today show to The Late Show with Stephen Colbert, lighting the world on fire and changing the face of chemistry as we know it. In *It's Elemental*, she demystifies the fundamental principles of the science that may have eluded you in high school and shows how chemistry comes alive in everything we do. With wry wit and infectious enthusiasm, this entertaining guide will ignite your passion for science and change the way you experience the world.

Charming and vividly evocative... I feel as if I have got to know these islands, and almost to have been there.' Helena Drysdale, author of *Strangerland* Ah, to be an embryo again. Christopher Vanier's story begins where we all do, conception. Set in 1940s and 1950s on the Caribbean island of St Kitts and beset by a troubled colonial legacy, both Christopher and his island yearn for independence. Vanier recalls the mischief of an island childhood: giving his baby brother to an ungrateful monkey, sneaking out to the cinema after school hours, hair-raising jaunts on a volcano, disastrous experiments involving a rocket... Is this boy lost in the plain sailing of childhood or can he turn his curiosity into Caribbean Chemistry? This is a story of self-discovery, told candidly in language rich enough to eat: Breadfruit, breadnut, bamboo, lignum vitae, marouba, weedee, and calabash. Funny and engaging, a story about breaking the barriers of identity and finding them again. A rare view of the emigrant's tale.
