The Central Science, Global Edition Prentice Hall  
Deviant Behavior offers an engaging and wide-ranging discussion of deviant behavior, beliefs, and conditions. It examines how the society defines, labels, and reacts to whatever, and whoever, falls under this stigmatizing process—thereby providing a distinctly sociological approach to the phenomenon. The central focus in defining what and who is deviant is the audience—members of the influential social collectivities that determine the outcome of this process. The discussion in this volume encompasses both the explanatory (or positivist) approach and the constructionist (or labeling) perspectives, thereby lending a broad and inclusive vista on deviance. The central chapters in the book explore specific instances or forms of deviance, including crime, substance abuse, and mental disorder, all of which share the quality that they and their actors, believers, or bearers may be judged by these influential parties in a negative or derogatory fashion. And throughout Deviant Behavior, the author emphasizes that, to the sociologist, the term "deviant" is completely non-pejorative; no implication of inferiority or inherent stigma is implied; what the author emphasizes is that specific members of the

society—social circles or collectivities—define and treat certain parties in a derogatory fashion; the sociologist does not share in this stigmatizing process but observes and describes it.

Lea's Chemistry of Cement and Concrete deals with the chemical and physical properties of cements and concretes and their relation to the practical problems that arise in manufacture and use. As such it is addressed not only to the chemist and those concerned with the science and technology of silicate materials, but also to those interested in the use of concrete in building and civil engineering construction. Much attention is given to the suitability of materials, to the conditions under which concrete can excel and those where it may deteriorate and to the precautionary or remedial measures that can be adopted. First published in 1935, this is the fourth edition and the first to appear since the death of Sir Frederick Lea, the original author. Over the life of the first three editions, this book has become the authority on its subject. The fourth edition is edited by Professor Peter C. Hewlett, Director of the British Board of Agreement and visiting Industrial Professor in the Department of Civil Engineering at the University of Dundee. Professor Hewlett has brought together a distinguished body of international contributors to produce an edition which is a worthy successor to the previous editions.
