Materials Chemistry John Wiley & Sons (Sponsored by the Middle Level Education Research Special Interest Group and the National Middle School Association) Studies like the Third International Mathematics and Science Study (TIMSS) have compared the performance of U.S. middle grade students (i.e., eighth graders) to those in other countries. In relation to middle grade schools, 20 countries outperformed the United States in mathematics and nine countries scored above the U.S. in science. The intent of this volume of The Handbook of Research in Middle Level Education, An International Look at Educating Young Adolescents, is to broaden our understanding of middle grade schooling by critically examining the education of young adolescents (ages 10-15, typically grades 6-8) through an international lens. In addition to looking at how schooling and students are organized for teaching and learning, this handbook will focus on the successes and failures that are evident in a wide variety of nations, present the indictments and praises that have been offered by supporters and critics alike, and review the research that has been generated about educating young adolescents in an effort to cross national boundaries. Ultimately, this volume of the handbook series will explore what international perspectives teach us about the effective education of young adolescents.

This book constitutes the Proceedings of the conference 'Chemical Structures: The International Language of

Chemistry' which was held at Leeuwenhorst Congress Centre, Noordwijkerhout in the Netherlands, between May 31 and June 4, 1987. The conference was jointly sponsored by the Chemical Structure Association, the American Chemical Society Division of Chemical Information, and the Chemical Information Groups of the Royal Society of Chemistry and the German Chemical Society. The purpose of the conference was to bring together experts and an international professional audience to discuss and to further basic and applied research and development in the processing, storage, retrieval and use of chemical structures, to focus international attention on the importance of chemical information and the vital research being carried out in chemical information science and to foster co-operation among major chemical information organisations in North America and Europe. Subjects covered included integrated in-house databases, substructure searching methodology, spectral databanks, new technologies (microcomputers, CD-ROM, parallel processing and expert systems) and chemical reactions. The keynote address was given by Mike Lynch of the University of Sheffield. In this, the opening chapter of the book, Mike discusses progress made in chemical information science in the last fifteen years and describes his own approach to research. In a plenary session, Myra Williams of Merck, Sharp and Dohme considered future trends from the point of view of the information manager and strategic planner in industry. She emphasises the need for integration,

open architecture and a uniform user interface.

"This book is for you, and every text feature is meant to help you learn and succeed in your chemistry course. I wrote this book with two main goals for you in mind: to see chemistry as you never have before and to develop the problem-solving skills you need to succeed in chemistry. I want you to experience chemistry in a new way. I have written each chapter to show you that chemistry is not just something that happens in a laboratory; chemistry surrounds you at every moment. Several outstanding artists have helped me to develop photographs and art that will help you visualize the molecular world. From the opening example to the closing chapter, you will see chemistry. My hope is that when you finish this course, you will think differently about your world because you understand the molecular interactions that underlie everything around you. My second goal is for you to develop problem-solving skills. No one succeeds in chemistry-or in life, really-without the ability to solve problems. I can't give you a one-size-fits-all formula for problem solving, but I can and do give you strategies that will help you develop the chemical intuition you need to understand chemical reasoning"--

Discussing the definition of pressure sensitivity and characterization of pressure-sensitive behavior, Volume 1 of the Handbook of Pressure-Sensitive Adhesives and Products presents the underlying theory behind the main criteria of pressure sensitivity, including Dahlquist criterion, free volume theory, and fibrillation theory, and the pressure-sensitive performance characteristics defined by tack, peel resistance, and shear resistance. It describes the chemical and macromolecular basis of pressure sensitivity as determined by molecular mobility and its parameters and molecular structure and its regulation. The book also addresses the physical and mechanical basis of pressure sensitivity along with the mechanical properties of pressure-sensitive adhesives and products that correlate to their adhesive, converting, and end-use performance characteristics.

In the tradition of Oliver Sacks's *The Island of the Colorblind*, Rosemary Mahoney tells the story of Braille Without Borders, the first school for the blind in Tibet, and of Sabriye Tenberken, the remarkable blind woman who founded the school. Fascinated and impressed by what she learned from the blind children of Tibet, Mahoney was moved to investigate further the cultural history of blindness. As part of her research, she spent three months teaching at Tenberken's international training center for blind adults in Kerala, India, an experience that reveals both the shocking oppression endured by the world's

blind, as well as their great resilience, integrity, ingenuity, and strength. By living among the blind, Rosemary Mahoney enables us to see them in fascinating close up, revealing their particular "quality of ease that seems to broadcast a fundamental connection to the world." Having read *For the Benefit of Those Who See*, you will never see the world in quite the same way again. "In this intelligent and humane book, Rosemary Mahoney writes of people who are blind . . . She reports on their courage and gives voice, time and again, to their miraculous dignity." -- Andrew Solomon, author of *Far From the Tree*

While every mode of transportation in the U.S. will be affected as the climate changes, potentially the greatest impact on transportation systems will be flooding of roads, railways, transit systems, and airport runways in coastal areas because of rising sea levels and surges brought on by more intense storms, says a new report from the National Research Council. Though the impacts of climate change will vary by region, it is certain they will be widespread and costly in human and economic terms, and will require significant changes in the planning, design, construction, operation, and maintenance of transportation systems. The U.S. transportation system was designed and built for local weather and climate conditions, predicated on historical temperature and precipitation data. The report finds that climate predictions used by transportation

planners and engineers may no longer be reliable, however, in the face of new weather and climate extremes.

Infrastructure pushed beyond the range for which it was designed can become stressed and fail, as seen with loss of the U.S. 90 Bridge in New Orleans after Hurricane Katrina.
