If it's Purple, Someone's Gonna Die is a must-read book for all film students, film professionals, and others interested in filmmaking. This enlightening book guides

filmmakers toward making the right color selections for their films, and helps movie buffs understand why they feel the way they do while watching movies that incorporate

certain colors. Guided by her twenty-five years of research on the effects of color on behavior, Bellantoni has grouped more than 60 films under the spheres of influence of six major colors, each of which triggers very specific emotional states. For example, the author explains that films with a dominant red influence have themes and characters that are powerful, lusty, defiant, anxious, angry,

or romantic and discusses specific films as examples. She explores each film, describing how, why, and where a color influences emotions, both in the characters on screen and in the audience. Each color section begins with an illustrated Home Page that includes examples, anecdotes, and tips for using or avoiding that particular color. Conversations with the author's colleagues-- including award-winning

production designers Henry Bumstead (Unforgiven) and Wynn Thomas (Malcolm X) and renowned cinematographers Roger Deakins (The Shawshank Redemption) and Edward Lachman (Far From Heaven)--reveal how color is often used to communicate what is not said. Bellantoni uses her research and experience to demonstrate how powerful color can be and to increase readers awareness of the colors around us

and how they make us feel, act, and react.
*Learn how your choice of color can influence an audience's moods, attitudes, reactions, and interpretations of your movie's plot
*See your favorite films in a new light as the author points out important uses of color, both instinctive and intentional
*Learn how to make good color choices, in your film and in your world.

There was a time when the Chevrolet Nova was considered a budget option, a model engineered primarily for the price-conscious customer. Certainly performance models were already in Chevrolet's fold. With the Camaro, the Corvette, and the Chevelle leading the way, why would Chevy need another performance model? Well, savvy Chevy customers knew that you could get a really tricked-out Nova right from the factory with SS packages and big-block 396 engines along with performance transmissions and gearing for a fair amount less than an equally equipped Camaro. As a bonus,

Novas were lighter weight too. It was the performance bargain of the Chevy lineup. Fast forward to today. The first-generation Camaros cost a small fortune, and while Novas have held their value quite well, they are still a performance bargain compared to the other Chevy performance models of the era. Not only are they more affordable than Camaros, but you can do a whole lot to make them really fast. In Chevy Nova 1968-1974: How to Build and Modify, veteran author and Chevy expert Wayne Scraba shows you all you need to know to build a killer street or strip Nova. Included is detailed information on driveline upgrades, rear-suspension options for the ultimate hook, front-

end suspension and chassis components for good handling and weight transfer, excellent brake upgrades, engine swap options, cooling system upgrades, and more. Focusing on quarter-mile performance, Scraba expertly covers all of your options for a strong-running street Nova, a street-strip combo package, or all-out drag racing options. If you want to build your Nova into a quarter-mile warrior, this book is an essential tool for success.

The LT1, along with its more powerful stablemate, the LT4, raised the bar for performance-oriented small-blocks until the introduction of the LS1 in 1997. The LT1/LT4 engines are

powerful, relatively lightweight, and affordable. They powered Chevrolet's legendary Impala SS (and thousands of similar police cars), Corvettes, and Camaros and remain viable choices for enthusiasts today. This book investigates every component of these engines, discussing their strong and weak points and identifying characteristics. Upgrades and modifications for both improved power production and enhanced durability are described and explained in full. *Troubleshooting, Removal, Disassembly, Reconditioning, Assembly, Installation & Tune-Ups* Haynes Manuals N. Whether you look

at quantity, quality, or readership, we are in an unprecedented era of fan fiction. Thus far, however, the genre has been subject to relatively little rigorous qualitative or quantitative study--a problem that Judith May Fathallah remedies here through close analysis of fanfiction related to Sherlock, Supernatural, and Game of Thrones. Her large-scale study of the sites, receptions, and fan rejections of fanfic demonstrate how it often legitimates itself through traditional notions of authorship even as its explicit

discussion and deconstruction of the author figure contests traditional discourses of authority and opens new spaces for writing that challenges the authority of media professionals. *If It's Purple, Someone's Gonna Die: The Power of Color in Visual Storytelling* CarTech Inc
