The Spitfire remains one of the most iconic combat aircrafts of all time and to own an airworthy example of this classic fighter is the Holy Grail for many wealthy Warbird collectors. For an aircraft that first flew more than 70 years ago and which went out of production in the early 1950s, it may seem odd to discover that there is a flourishing industry centered on this aircraft in the 21st

century. Scratch-building brand new Spitfires or restoring original examples to airworthy condition has become big business, with aircrafts changing hands for several million dollars apiece. Husband and wife author team Paul and Louise Blackah look into what is required to find a Spitfire that's suitable for restoration and then return it to the skies. With Paul's vast experience in restoring and maintaining the RAF BBMF's Spitfires, and both Paul and Louise's contacts in the aircraft restoration community, this promises to be a unique look inside the world of Spitfire building and restoration in the 21st century.

This book analyzes the role that human forms play in visualizing practical information and in making that information understandable, accessible, inviting, and meaningful to readers—in short, "humanizing" it. Although human figures have long been deployed in practical communication, their uses in this context have received little systematic analysis. Drawing on rhetorical theory, art history, design studies, and historical and contemporary examples, the book explores the many rhetorical purposes that human forms play in functional pictures, including empowering readers, narrating processes, invoking social and cultural identities, fostering pathos appeals, and visualizing data. The book is aimed at scholars, teachers, and practitioners in business, technical, and professional communication as well as an interdisciplinary audience in rhetoric, art and design, journalism, engineering, marketing, science, and history.

Management decisions on appropriate practices and policies regarding tropical forests often

need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of

lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper

information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that

change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at

different scales and how they varied through time in response to policy and other

processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with

stakeholder input, which focuses on FSC certification of natural tropical forests.

More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy

effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this

volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production

have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as

the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner

with interested parties, from institutions and organizations, to communities and individuals.
