Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive

engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a

multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system

overview, making it much easier to find hands-on fix-it instructions. The New York Times – bestselling authors of Hit List examine questionable deaths & “suicides” in this collection of conspiracy theories. For years, the government has put out hits on people that they found “expendable,” or who they felt were “talking too much,”

covering up their assassinations with drug overdoses and mysterious suicides. In *Dead Wrong*, a study of the scientific and forensic facts of various Government cover-ups, Richard Belzer and David Wayne argue that Marilyn Monroe was murdered and that the person who shot Martin Luther King Jr. was ordered to do so by the government. They also examine many other terrifying lies we've been told throughout our country's history. The extensive research shows how our government has taken matters into its own hands, plotting murder whenever it saw fit. Belzer and Wayne also examine the deaths of

White House Counsel Vincent Foster, U.N. Weapons Inspector Dr. David C. Kelly, and bio-weapons expert Dr. Frank Olson, as well as the cases of two murders directly linked Lyndon B. Johnson, the 36th President of the United States. "Big Brother" is watching you—through the scope of a sniper rifle. Dead Wrong will give you the straight facts on some of the most controversial and famous deaths this country has ever seen. The harsh reality is that our government only tells us what we want to hear, as they look out for their own best interests and eliminate anyone who gets in their way.

there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs.
