While the
midlife crisis
has been
thoroughly

explored by
experts, there
is another
landmine period
in our adult
development,
called the
quarterlife
crisis, which
can be just as
devastating.
When young
adults emerge
at graduation

from almost two decades of schooling, during which each step to take is clearly marked, they encounter an overwhelming number of choices regarding their careers, finances, homes, and social networks. Confronted by an often shattering whirlwind of new responsibilities, new liberties, and new options, they feel helpless, panicked, indecisive, and apprehensive. Quarterlife Crisis is the first book to document this phenomenon and offer insightful advice on smoothly navigating the challenging transition from childhood to adulthood, from school to the world beyond. It includes the personal stories of more than one hundred twentysomethings who describe their struggles to carve out personal identities; to cope with their fears of failure; to face making choices rather than avoiding them; and to balance all the demanding aspects of personal and professional life. From "What do all my doubts mean?" to "How do I know if the decisions I'm making are right?" this book compellingly addresses the hardest questions facing young adults today.

The Innovator's

Method Nicholson

The COPO

Camaros,

Chevelles, and

Novas of the 1960s

and early 1970s

were the ultimate

high-performance

GM muscle cars.

While few knew

about this back

channel program at

the time, it is now

recognized as the

origin of GM's top muscle cars.

Dedicated Chevy

racers and car

owners were

determined to

compete head-to-

head with Mopar

and Ford at the

racetrack and on the

street. But in order

to do so, they

needed to

circumvent the

corporate ban on

racing and resolve

the restriction of

400-ci engines in

intermediate

vehicles. Don

Yenko and some

other creative

individuals

recognized the

loophole in the

COPO (Central

Office Production

Order) system at

General Motors.

The COPO program

was designated for

fleet vehicles such

as taxicabs, but at

the peak of the

muscle car wars it

was used to build

the ultimate high-

performance Chevy

muscle cars. Some

horrific on-track

accidents compelled

General Motors to

drop out of racing,

yet GM did not want

to allow Chrysler

and Ford to steal the

glory on Sundays

while they stood on

the sidelines. As a

result, GM

inconspicuously ran

the Chevy racing

and high-

performance

program through

back channels, and

COPO was integral

part of the program.

Don Yenke became

the COPO muscle

car program chief architect and champion. He ordered the Corvair through the COPO program and created the Corvair Stinger to mount a SCCA road race campaign. From these humble beginnings, the road map for creating the ultimate Camaros, Chevelles, and Novas was established. Factory Camaro V-8s came equipped with the 350 small-block or 396 big-block, which had to compete with the Mustang Cobra Jets and Mopar Wedge and Hemi cars. In response, building the big-block Camaro through the COPO program was devised. At the

factory, Camaros were fitted with the 396 engines and shipped to dealers where the 427s were installed in the cars. From 1967 to 1969, the factory and dealers installed eight different 427 engines, including the all aluminum ZL1 427. Later on, others used the road map to build COPO Novas and Chevelles to similar spec, with similar results. The COPO performance car program did not end with these muscle cars. Yenko even ordered several hundred Vegas through the COPO program, so they could be fitted with turbochargers and raced in SCCA

competition. Chevy muscle car aficionado and author Matt Avery retraces the history of the COPO program and the creation of these premier muscle cars. He has scoured archives and tracked down owners and personnel involved in the program to deliver a comprehensive story and complete guide to the COPO cars. The COPO muscle car and racing program produced a storied and remarkable journey, and author Matt Avery captures all these facets in this entertaining and revealing history.

"Many interesting
developments have
occurred in the
world of venture
capital since the
publication of the
first edition of this
book in 2006,
which prompted us
to revise the book
for the second
edition. While the
organization of the
book remains
unchanged, many
of the chapters are
substantially
rewritten. For
example, in
Chapter 5, we re-
ranked top VC
firms, incorporating
the latest
performance
statistics,
fundraising and
investment
activities, notable

exits, and (as
always) our
subjective opinions.
In Chapter 6, we
examine further
evidence of the
deepening
globalization of the
industry. In
Chapters 3, 4, and
7, we analyze the
impact of the
1999-2000 Internet
bubble years on the
VC risk and returns,
as investments
made in those years
are finally mature
and thus now a part
of the performance
evaluation analysis.
We also
incorporated
expositional
improvements
throughout the book
based on reader
feedback on the first
edition. Another
feature of the new
edition is that the
VCV model, used
extensively in Part

III of the book, is
now available as a

on

. Significant
collaborative efforts
went into
developing this tool,
which we believe
will be of interest to
a broad audience,
including
practitioners
interested in valuing

Transportation and Logistics

Penguin Have you ever come up with an idea for a new product or service but didn't take any action because you thought it would be too risky? Or at

work, have you had what you thought could be a big idea for your company—perhaps changing the way you develop or distribute a product, provide customer service, or hire and train your employees? If you have, but you haven't known how to take the next step, you need to understand what the authors call the innovator's method—a set of tools emerging from lean start-up, design thinking, and agile software development that are revolutionizing how new ideas are created, refined, and brought to market. To date these tools have helped entrepreneurs,

designers, and software developers manage uncertainty—through cheap and rapid experiments that systematically lower failure rates and risk. But many managers and leaders struggle to apply these powerful tools within their organizations, as they often run counter to traditional managerial thinking and practice. Authors Nathan Furr and Jeff Dyer wrote this book to address that very problem. Following the breakout success of *The Innovator's DNA*—which Dyer wrote with Hal Gregersen and bestselling author Clay Christensen to provide a

framework for generating ideas—this book shows how to make those ideas actually happen, to commercialize them for success. Based on their research inside corporations and successful start-ups, Furr and Dyer developed the innovator's method, an end-to-end process for creating, refining, and bringing ideas to market. They show when and how to apply the tools of their method, how to adapt them to your business, and how to answer commonly asked questions about the method itself, including: How do we know if this idea is worth pursuing? Have we found the

right solution? What is the best business model for this new offering? This book focuses on the “how”—how to test, how to validate, and how to commercialize ideas with the lean, design, and agile techniques successful start-ups use. Whether you’re launching a start-up, leading an established one, or simply working to get a new product off the ground in an existing company, this book is for you.
