America is on the brink of a green energy revolution that can save the planet, and increase peace and prosperity, by harnessing the unlimited solar power. After decades of promise, the technology for alternative energy solutions now exists to replace our dangerous addiction to fossil fuels with cheap, clean solar energy. Neville Williams has been on the leading edge of this revolution for decades and knows from firsthand experience how sun power can transform lives and communities for the better. He has traveled the globe bringing solar-generated electricity to struggling communities throughout Asia, Africa, India, and the developing world. From isolated villages high in the mountains of Nepal to remote settlements in South Africa, Williams has worked to bring sun power to even the most off-the-grid reaches of the planet. He has brought that knowledge and experience back to America where he founded one of the country's fastest growing solar companies. If millions of poor families in the Third World can get their power from the sun, why can't Americans concerned with their rising power bills, dependence on foreign oil, and carbon footprints do the same? The answer is that sun power is here, it works, and can light up a new era of economic and environmental security—if we have the will to seize this historic opportunity. This book is not about predictions or promises. It's about what's happening now, all over the world, and what still needs to be done. As a preteen Black male growing up in Mount Vernon, New York, there were a series of moments, incidents and wounds that caused me to retreat inward in despair and escape into a world of imagination. For five years I protected my family secrets from authority figures, affluent Whites and middle class Blacks while attending an unforgiving gifted-track magnet school program that itself was embroiled in suburban drama. It was my imagination that shielded me from the slights of others, that enabled my survival and academic success. It took everything I had to get myself into college and out to Pittsburgh, but more was in store before I could finally begin to break from my past. "Boy @ The Window" is a coming-of-age story about the universal search for understanding on how any one of us becomes the person they are despite-or because of-the odds. It's a memoir intertwined with my own search for redemption, trust, love, success-for a life worth living. "Boy @ The Window" is about one of the most important lessons of all: what it takes to overcome inhumanity in order to become whole and human again.

Six months after its American introduction in 1985, the Yugo was a punch line; within a year, it was a staple of late-night comedy. By 2000, NPR's Car Talk declared it "the worst car of the millennium." And for most Americans that's where the story begins and ends. Hardly. The short, unhappy life of the car, the men who built it, the men who imported it, and the decade that embraced and discarded it is rollicking and astounding, and one of the greatest untold business-cum-morality tales of the 1980s. Mix one rabid entrepreneur, several thousand "good" communists, a willing U.S. State Department, the shortsighted Detroit auto industry, and improvident bankers, shake vigorously, and you've got The Yugo: The Rise and Fall of the Worst Car in History. Brilliantly re-creating the amazing confluence of events that produced the Yugo, Yugoslav expert Jason Vuic uproariously tells the story of the car that became an international joke: The American CEO who happens upon a Yugo right when his company needs to find a new import or go under. A State Department eager to aid Yugoslavia's nonaligned communist government. Zastava Automobiles, which overhauls its factory to produce an American-ready Yugo in six months. And a hole left by Detroit in the cheap subcompact market that creates a race to the bottom that leaves the Yugo . . . at the bottom.
