The digital age has had a profound effect on our cultural heritage and the academic research that studies it. Staggering amounts of objects, many of them of a textual nature, are being digitised to make them more readily accessible to both experts and laypersons. Besides a vast potential for more effective and efficient preservation, management, and presentation, digitisation offers opportunities to work with cultural heritage data in ways that were never feasible or even imagined. To explore and exploit these possibilities, an interdisciplinary approach is needed, bringing together experts from cultural heritage, the social sciences and humanities on the one hand, and information technology on the other. Due to a prevalence of textual data in these domains, language technology has a crucial role to play in this endeavour. Language technology can break through the "Google barrier" by offering the potential to analyse texts at advanced levels, extracting information and knowledge at the level of the humanities or social sciences researcher, who wants to know about the who, what, where, and when, but also the how and the why. At the same time cultural heritage data poses considerable challenges for existing language technology: technology aimed at "generic" language has to face such disparate problems as historical language variation, OCR digitisation errors, and near-extinct academic expertise. This book is primarily intended for researchers in information technology and language processing who would like to receive a state-of-the-art overview of the whole breadth of the new and vibrant field of language technology for cultural heritage and its associated academic research in the humanities and social sciences. Researchers working in the target domains of cultural heritage, the social sciences and humanities will also find this book useful, as it provides an overview of how language technology can help them with their information needs. The book covers applications ranging from pre-processing and data cleaning, to the adaptation and compilation of linguistic resources, to personalisation, narrative analysis, visualisation and retrieval. **Certificate Physics And Human Geography: Indian Edition** Universal Law Publishing Volume one of a two volume set outlining and comparing three approaches to the study of language labelled 'structural-functional': functional grammar (FG); role and reference grammar (RRG); and systemic functional grammar (SFG).

This volume collects novel contributions to comparative generative linguistics that "rethink" existing approaches to an extensive range of phenomena, domains, and architectural questions in linguistic theory. At the heart of the contributions is the tension between descriptive and explanatory adequacy which has long animated generative linguistics and which continues to grow thanks to the increasing amount and diversity of data available to us. The chapters address research questions on the relation of syntax to other aspects of grammar and linguistics more generally, including studies on language acquisition, variation and change, and syntactic interfaces. Many of these contributions show the influence of research by Ian Roberts and collaborators and give the reader a sense of the lively nature of current discussion of topics in synchronic and diachronic comparative syntax ranging from the core verbal domain to higher, propositional domains.

This collection presents a number of studies in the lexico-grammar of English which focus on the one hand on close reading of language in context and on the other hand on current functional theoretical concerns. The various contributions represent distinct functionalist models of language, including Functional Grammar and Functional Discourse Grammar, Systemic-Functional Grammar, Role and Reference Grammar, Cognitive Grammar and Construction Grammar. Taken together, however, they typify current work being conducted from the

grammatical perspective within the functionalist enterprise, emphasizing on the relation between structure and usage. A fundamental goal of the enterprise is to identify linguistic structures which are constrained by specific features of use, or which actually encode specific features of use, as many of the contributions here show.

This volume offers the reader a unique possibility to obtain a concise introduction to dependency linguistics and to learn about the current state of the art in the field. It unites the revised and extended versions of the linguistically-oriented papers to the First International Conference on Dependency Linguistics held in Barcelona. The contributions range from the discussion of definitional challenges of dependency at different levels of the linguistic model, its role beyond the classical grammatical description, and its annotation in dependency treebanks to concrete analyses of various cross-linguistic phenomena of syntax in its interplay with phonetics, morphology, and semantics, including phenomena for which classical simple phrase-structure based models have proven to be unsatisfactory. The volume will be thus of interest to both experts and newcomers to the field of dependency linguistics and its computational applications.

The Semantics of Prepositions Springer Nature

With a few notable exceptions, analytical philosophy of religion in the West still continues to focus almost entirely on the Iudaeo-Christian tradition. In particular, it is all too customary to ignore the rich fund of concepts and arguments supplied by the Indian religious tradition. This is a pity, for it gratuitously impoverishes the scope of much contemporary philosophy of religion and precludes the attainment of any insights into Indian religions comparable to those that the clarity and rigour of analytic philosophy has made possible for the Iudaeo-Christian tradition. This volume seeks to redress the imbalance. The original idea was to invite a number of Indian and Western philosophers to contribute essays treating of Indian religious concepts in the style of contemporary analytical philosophy of religion. No further restriction was placed upon the contributors and the resulting essays (all previously unpublished) exhibit a diversity of themes and approaches. Many arrangements of the material herein are doubtless defensible. The rationale for the one that has been adopted is perhaps best presented through some introductory remarks about the essays themselves.
