This volume collects novel contributions to comparative generative linguistics that “rethink” existing approaches to an extensive range of phenomena, domains, and architectural questions in linguistic theory. At the heart of the contributions is the tension between descriptive and explanatory adequacy which has long animated generative linguistics and which continues to grow thanks to the increasing amount and diversity of data available to us. The chapters address research questions on the relation of syntax to other aspects of grammar and linguistics more generally, including studies on language acquisition, variation and change, and syntactic interfaces. Many of these contributions show the influence of research by Ian Roberts and collaborators and give the reader a sense of the lively nature of current discussion of topics in synchronic and diachronic comparative syntax ranging from the core verbal domain to higher, propositional domains.

With a few notable exceptions, analytical philosophy of religion in the West still continues to focus almost entirely on the Iudaeo-Christian tradition. In particular, it is all too customary to ignore the rich fund of concepts and arguments supplied by the Indian religious tradition. This is a pity, for it gratuitously impoverishes the scope of much contemporary philosophy of religion and precludes the attainment of any insights into Indian religions comparable to those that the clarity and rigour of analytic philosophy has made possible for the Iudaeo-Christian tradition. This volume seeks to redress the imbalance. The original idea was to invite a number of Indian and Western philosophers to contribute essays treating of Indian religious concepts in the style of contemporary analytical philosophy of religion. No further restriction was placed upon the contributors and the resulting essays (all previously unpublished) exhibit a diversity of themes and approaches. Many arrangements of the material herein are doubtless defensible. The rationale for the one that has been adopted is perhaps best presented through some introductory remarks about the essays themselves.

This volume offers the reader a unique possibility to obtain a concise introduction to dependency linguistics and to learn about the current state of the art in the field. It unites the revised and extended versions of the linguistically-oriented papers to the First International Conference on Dependency Linguistics held in Barcelona. The contributions range from the discussion of definitional challenges of dependency at different levels of the linguistic model, its role beyond the classical grammatical description, and its annotation in dependency treebanks to concrete analyses of various cross-linguistic phenomena of syntax in its interplay with phonetics, morphology, and semantics, including phenomena for which classical simple phrase-structure based models have proven to be unsatisfactory. The volume will be thus of interest to both experts and newcomers to the field of dependency linguistics and its computational applications.
