[Becoming a Multicultural Educator](#) McGraw-Hill Humanities, Social Sciences & World Languages

This book is an expedition into a number of controversial issues in the social sciences with the intention of challenging the conventional wisdom on those issues. While most social science research is interesting and important, a fair amount of social science research is thinly disguised advocacy research in which conclusions too often precede inquiries. The primary topics are those that the journal Nature described as "Taboo". In order of the degree of censure, the topics are: race, sex differences, intelligence, and violence. The only way to examine these topics with the social science seal of approval attached is through a strictly environmental lens. To bring biological factors to bear on them is politically incorrect and can bring the wrath of the academy down on one's head. Although many researchers successfully bring biology into their research on these issues, they are said to risk career and reputation for

doing so. Speech codes stifling free intellectual exchange pervade the ivory tower, and an overwhelmingly liberal faculty hell-bent on eliminating any vestiges of opposition to their ideology. This is unconscionable in an institution that is supposed to value free exchange of all ideas and opinions. The current state of academic social science is examined before entering the substantive realm to try to explore how the topics I explore have become protected from any claims of "naturalness." Because the left rejects the idea of human nature, it insists that these things are products of social learning and/or social construction and are entirely fluid. To maintain this position in light of the huge and exponential successes of the natural sciences, the left embraces such frames of reasoning as postmodernism, radical relativism, multiculturalism, and political correctness, all of which are examined in this book. Also discussed are human nature, whiteness studies, political temperaments, various criminal justice issues, and capitalism versus socialism. The Race Bomb SAGE

This text examines the negative practices of schools which are resulting in school systems failing students. Such practices include intrusive authoritarian

administrative structures and procedures; inappropriate discipline; unrealistic expectations; and placid acceptance of exclusionary practices. Indeed, educational systemic violence includes any practice or procedure that prevents students from learning, thus harming them. Taking a close look at ways in which current social problems may be a result of, or even supported by, compulsory schooling, the contributors to this volume consider whether or not schools contribute to the violence amongst modern young people.

Red Star Over Malaya Pearson Scott Foresman

Red Star Over Malaya is an account of the inter-racial relations between Malays and Chinese during the final stages of the Japanese occupation. In 1947, none of the three major race of Malaya - Malays, Chinese, and Indians - regarded themselves as pan-ethnic "Malayans" with common duties and problems. With the occupation forcibly cut them off from China, Chinese residents began to look inwards towards Malaya and stake political claims, leading inevitably to a political contest with the Malays. As the country advanced towards nationhood and self-government, there was tension between traditional loyalties to the Malay rulers and the states, or to ancestral homelands elsewhere, and the need to cultivate an enduring loyalty to Malaya on the part of those who would make their home there in future. As Japanese forces withdrew from the countryside, the Chinese guerrillas of the communist-led resistance movement, the Malayan People's Anti-Japanese Army (MPAJA), emerged from the jungle and took control of some

70 per cent of the country's smaller towns and villages, seriously alarming the Malay population. When the British Military Administration sought to regain control of these liberated areas, the ensuing conflict set the tone for future political conflicts and marked a crucial stage in the history of Malaya. Based on extensive archival research, Red Star Over Malaya provides a riveting account of the way the Japanese occupation reshaped colonial Malaya, and of the tension-filled months that followed Japan's surrender. This book is fundamental to an understanding of social and political developments in Malaysia during the second half of the 20th century.

Methods for the Ethnography of Communication is a guide to conducting ethnographic research in classroom and community settings that introduces students to the field of ethnography of communication, and takes them through the recursive and nonlinear cycle of ethnographic research. Drawing on the mnemonic that Hymes used to develop the Ethnography of SPEAKING, the authors introduce the innovative CULTURES framework to provide a helpful structure for moving through the complex process of collecting and analyzing ethnographic data and addresses the larger "how-to" questions that students struggle with when undertaking ethnographic research. Exercises and activities help students make the connection between communicative events, acts, and situations and ways of studying them ethnographically. Integrating a primary focus on language in

use within an ethnographic framework makes this book an invaluable core text for courses on ethnography of communication and related areas in a variety of disciplines.
