Significant gaps exist in the ability of the United States and its allies to deter or defeat aggression that could threaten national interests. For example, NATO members Estonia, Latvia, and Lithuania remain vulnerable to Russian invasion. South Korea is vulnerable to North Korea's artillery. China's neighbors — especially Taiwan — are vulnerable to coercion and aggression. Violent extremists continue to pose a threat in the Middle East. Solutions to these problems will take both money and time. In this report, RAND researchers analyze the specific technological, doctrinal, and budgetary gaps between the stated strategic and defense policies of the United States and the resources and capabilities that would be required to implement those policies successfully. Absent a change in administration policy or a new political consensus in favor of a defense buildup, there will not be enough resources to close the gap between stated U.S. aims and the military capabilities needed to achieve them. This leaves the Trump administration and this Congress with some difficult choices. The United States could decide to focus primarily on its own security, devoting to allies and partners only those forces and capabilities that could be easily spared. At the other end of the spectrum, the Trump administration could take the central role in defending U.S. allies against aggression by Russia, China, and other potential adversaries. The hard-to-find middle ground would be to provide the military with sufficient capabilities to ensure that aggression that imperils U.S. interests in critical regions would fail while helping allies build the capacity to do more for their own and the collective defense.

The lengthy introduction by the eminent sociologist Werner Stark provides a framework for understanding not just the importance of a singular thinker, but also the entire fabric of German history from Bismarck, the Kaiser, the Weimar Republic, and Nazism, to the post-World War II effort at the cultural, no less than material reconstruction of a democratic Germany.

Dark Days in the Newsroom traces how journalists became radicalized during the Depression era, only to become targets of Senator Joseph McCarthy and like-minded anti-Communist crusaders during the 1950s. Edward Alwood, a former news correspondent describes this remarkable story of conflict, principle, and personal sacrifice with noticeable é lan. He shows how McCarthy's minions pried inside newsrooms thought to be sacrosanct under the First Amendment, and details how journalists mounted a heroic defense of freedom of the press while others secretly enlisted in the government's anti-communist crusade. Relying on previously undisclosed documents from FBI files, along with personal interviews, Alwood provides a richly informed commentary on one of the most significant moments in the history of American journalism. Arguing that the experiences of the McCarthy years profoundly influenced the practice of journalism, he shows how many of the issues faced by journalists in the 1950s prefigure today's conflicts over the right of journalists to protect their sources.

The multilingual situation in Cameroon and the status of English as a co-official language constitute a unique and fascinating case for sociolinguistic investigation. Drawing from first-hand material, the author investigates several aspects of this complex configuration, including the historical development of

English in Cameroon, the various languages and lingua franca areas, the linguistic policy, the de facto status of English and the situation in the anglophone provinces. The speech community of the Anglophones is highlighted as a rare example of an ethnicity tied to the second language. Apart from important sociolinguistic findings, the work includes a novel, corpus-based analysis of Cameroon English. Certain lexical phenomena are explained by the cognitive coding of culture - particularly the African cultural model of community, which also underlies the self-perception of the Anglophones - a perspective hitherto neglected in the study of the New Englishes.

Building on concepts from Science & Technology Studies, Simon David Hirsbrunner investigates practices and infrastructures of computer modeling and science communication in climate impact research. The book characterizes how scientists calculate future climate risks in computer models and scenarios, but also how they circulate their insights and make them accessible and comprehensible to others. By discussing elements such as infrastructures, visualizations, models, software and data, the chapters show how computational modeling practices are currently changing in light of digital transformations and expectations for an open science. A number of inventive research devices are proposed to capture both the fluidity and viscosity of contemporary digital technology.

Despite Alexander the Great's unprecedented accomplishments, during the last seven years of his life, this indomitable warrior became increasingly unpredictable, sporadically violent, megalomaniacal, and suspicious of friends as well as enemies. What could have caused such a lamentable transformation? This biography seeks to answer that question by assessing the role of alcohol in Alexander the Great's life, using the figure of Dionysus as a symbol of its destructive effects on his psyche. The unique methodology employed in this book explores various aspects of Alexander's life while maintaining an historical framework. The exposition of the main theme is handled in such a way that the biography will appeal to general readers as well as scholars.

The law of hiring is a patchwork of rules. Some are directly stated in federal or state statutes and regulations, some are interpreted or derived from statutes, and others are rules of common law. In the public sector, other rules derive from the federal and state constitutions. This book covers the law of recruitment and selection as it applies to North Carolina local government and community college employers. The book will also benefit mental health authorities, water and sewer authorities, public health authorities, local ABC boards, and Councils of Government. Initial chapters of the book survey the various rules that comprise the law of hiring for public employers. Later chapters look more closely at the different stages of the hiring process. Although the book primarily focuses on how laws impact North Carolina local governments, it also covers these federal laws applicable to other states: -Fair Credit Reporting Act -Immigration Reform and Control Act -Americans with Disabilities Act -Genetic Information Nondiscrimination Act -federal anti-discrimination laws -Equal Employment Opportunity Commission (EEOC) The book includes an index of cases, an index of statutes, a subject index, and five appendixes related to small employers, affirmative action, validation of employment selection devices, the Fair Credit Reporting Act, and the EEOC.

In recent years, there has been much controversy about the proper forum in which to prosecute and punish suspected terrorists. Some have endorsed aggressive use of military commissions; others have proposed an entirely new "national security court." However, as the nation strives for a vigorous and effective response to terrorism, we should not lose sight of the important tools that are already at our disposal, nor should we forget the costs and risks of seeking to break new ground by departing from established institutions and practices. As this White Paper shows, the existing criminal justice system has proved successful at handling a large number of important and challenging terrorism prosecutions over the past fifteen years-without sacrificing national security interests, rigorous standards of fairness and due process, or just punishment for those guilty of terrorism-related crimes.

Ancestral fault is a core idea of Greek literature. 'The guiltless will pay for the deeds later: either the man's children, or his descendants thereafter', said Solon in the sixth century BC, a statement echoed throughout the rest of antiquity. This notion lies at the heart of ancient Greek thinking on theodicy, inheritance and privilege, the meaning of suffering, the links between wealth and morality, individual responsibility, the bonds that unite generations and the grand movements of history. From Homer to Proclus, it played a major role in some of the most critical and pressing reflections of Greek culture on divinity, society and knowledge. The burning modern preoccupation with collective responsibility across generations has a long, deep antecedent in classical Greek literature and its reception. This book retraces the trajectories of Greek ancestral fault and the varieties of its expression through the many genres and centuries where it is

found.

Made up of three books that are the earliest extant works of St. Augustine, these works claim to give a reliable picture of the mind and way of life of one of the greatest figures of the West, precisely at the moment that was for him most critical and vital. Augustine's Confessions and his earliest philosophical writings, represented here, are his most accessible extant works. Although his pieces are against pagan Platonism they represent the thought world which he and many other educated persons, pagan and Christian, inhabited at the time.

The only crisis of capitalism is capitalism itself. Let's toss credit default swaps, bailouts, environmental externalities and, while we're at it, private ownership of production in the dustbin of history. The Accumulation of Freedom brings together economists, historians, theorists, and activists for a first-of-its-kind study of anarchist economics. The editors aren't trying to subvert the notion of economics—they accept the standard definition, but reject the notion that capitalism or central planning are acceptable ways to organize economic life. Contributors include Robin Hahnel, Iain McKay, Marie Trigona, Chris Spannos, Ernesto Aguilar, Uri Gordon, and more.
