(a) Draw the logic circuit diagram for an octal to binary encoder and explain its working when a particular digit is pressed. Also, state the difference between encoders and decoders. In the above circuit, when the digit 5 is pressed, then the current flows in F2 and F0, so in these gates the output is 1 whereas we have 0 in F1.

Both AC and DC circuits can be solved
and simplified by using these simple
laws which is known as Kirchhoff's
Current Law (KCL) and Kirchhoff's
Voltage Law (KVL). Also note that KCL
is derived from the charge continuity
equation in electromagnetism while KVL
is derived from Maxwell – Faraday
equation for static magnetic field (the
derivative of B with respect to time is 0)
