"Emmet Gowin likes to ask a
provocative question: "Which
country on earth has had the
largest number of nuclear
bombs detonated within its
borders?" The answer is the
United States. Covering
approximately 680 square

miles, the Nevada National
Security Site, formerly known
as the Nevada Test Site, was
the primary testing location of
American nuclear devices from
1951 to 1992; 1,021 announced
nuclear tests occurred there,
921 of which were
underground. The site, which is
closed to the public, including
its airspace, contains 28 areas,
1,100 buildings, 400 miles of
paved roads, 300 miles of
unpaved roads, 10 heliports,
and two airstrips. Its surface is
covered with subsidence craters
from testing, and in places looks
like the moon. In 1996, Gowin
received permission to
document the landscape by air,
after over a decade of working
to secure access. These aerial
views of environmental
devastation--made quietly
majestic but no less potent in
the hands of a master
photographer--unveil
environmental travesties on a
grand scale. While groups of
images from the Nevada Test
Site series have been published
previously, this book will
produce the largest number yet,
and three quarters of the
pictures will not have been
published at all. Gowin is the
only photographer to have been
granted access to this site,
which is now permanently
closed, post-9/11. Other than
images made by the
government for geographic
purposes, no other images of
this landscape exist. The book
will feature a preface by

photographer Robert Adams (America, b. 1937), whose photographic and written work is concerned with landscape, urbanization, and activism. It will also feature an afterword by Gowin on how he made the images, and their significance to him today."--Provided by publisher.
