This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early

years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

In 1450 very few English men or women were personally familiar with a book; by 1850, the great majority of people daily encountered books, magazines, or newspapers. This book explores the history of this fundamental transformation, from the arrival of the printing press to the coming of steam. James Raven presents a lively and original account of the English book trade and the printers, booksellers, and entrepreneurs who promoted its development. Viewing print and book culture through the lens of commerce, Raven offers a new interpretation of the genesis of literature and literary commerce in England. He draws on extensive archival sources to reconstruct the successes and failures of those involved in the book trade—a cast of heroes and heroines, villains, and rogues. And, through groundbreaking investigations of neglected aspects of book-trade history, Raven thoroughly revises

our understanding of the massive popularization of the book and the dramatic expansion of its markets over the centuries.

Is there evidence to believe the Gospels? The Gospels—Matthew, Mark, Luke, John—are four accounts of Jesus ' s life and teachings while on earth. But should we accept them as historically accurate? What evidence is there that the recorded events actually happened? Presenting a case for the historical reliability of the Gospels, New Testament scholar Peter Williams examines evidence from non-Christian sources, assesses how accurately the four biblical accounts reflect the cultural context of their day,

compares different accounts of the same events, and looks at how these texts were handed down throughout the centuries. Everyone from the skeptic to the scholar will find powerful arguments in favor of trusting the Gospels as trustworthy accounts of Jesus ' s earthly life.

Agriculture dominates the rural economy of Papua New Guinea (PNG). More than five million rural dwellers (80% of the population) earn a living from subsistence agriculture and selling crops in domestic and international markets. Many aspects of agriculture in PNG are described in this data-rich book. Topics include agricultural environments in which crops are grown; production of food crops, cash crops and animals; land use; soils; demography; migration; the macro-economic environment; gender issues; governance of agricultural institutions; and transport. The history of agriculture over the 50 000 years that PNG has been occupied by humans is summarised. Much of the information presented is not readily available within PNG. The book contains results of many new analyses, including a food budget for the entire nation. The text is supported by 165 tables and 215 maps and figures.

This authoritative volume examines the two main faiths, Confucianism and Daoism, that developed before China had meaningful contact with the rest of the world. Aspects of Buddhism later joined features of these faiths to form elements of Chinese ideology and, with the beliefs in immortals and the worship of ancestors, they led to a popular religion. The narrative describes the gods and goddesses that dominated China's mythology and folk culture, roughly from the 3rd millennium to 221 BCE, including the Baxian (Eight Immortals), Chang'e (moon goddess), Guandi (god of war), the Men Shen (door spirits), and Pan Gu (first man).

This book examines the development of ancient Greek civilization through a path-breaking application of social scientific theories. David B. Small charts the rise of the Minoan and Mycenaean civilizations and the unique characteristics of the later classical Greeks through the lens of ancient social structure and complexity theory, opening up new ideas and perspectives on these societies. He argues that Minoan and Mycenaean institutions evolved from elaborate feasting, and that the genesis of Greek colonization was born from structural chaos in the eighth century. Small isolates distinctions between Iron Age Crete and the rest of the Greek world, focusing on important differences in social structure. His book differs from others on Ancient Greece, highlighting the perpetuation of classical Greek social structure into the middle years of the Roman Empire, and concluding with a comparison of the social structure of classical Greece to that of the classical Maya civilization.
